

## RF Exposure Info

Frequency Range: 2402-2480MHz

Low threshold =  $60/f(\text{GHz}) \text{ mW} = 60 / 2.480 = 24.19\text{mW}$

Conducted Output Power Measured (dBm) = 3.62dBm (see section 6.3 of test report)

Conducted Output Power (mW) = 2.3 mW

Antenna Gain (dBi) = -3.002 dBi (Measured maximum antenna gain)

EIRP = 1.15 mW

Since both Conducted Output Power and EIRP are below the low threshold, device complies with FCC and Industry Canada RF radiation exposure limits for general population/uncontrolled exposure as a portable device without SAR evaluation.
