12/4/98

TO: Mr. Errol Chang
FCC

Subject: AAO1901102

REFERENCE: 4624

When a signal is received and the squelch is opened it provides a switch signal that stops the PLL from scanning. When the squelch closes the switch causes the PLL to start scanning again.

This scanning receiver is used for entertainment, that is listening to various signals. It is also used by volunteer organization as a mean of communicating with the volunteers.

BEST REGARDS,

Sid Sanders
