### 5.7.1 TEST INSTRUMENTS

Description & Manufacturer	Model No.	Serial No.	Calibrated Until
R&S SPECTRUM ANALYZER	FSP40	100036	Nov. 23, 2005

**NOTE:**

- 1.The measurement uncertainty is less than +/- 2.6dB, which is calculated as per the NAMAS document NIS81.
- 2.The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

### 5.7.2 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer via a low lose cable. Set RBW of spectrum analyzer to 1MHz and VBW of spectrum analyzer to 10Hz with suitable frequency span including 100 MHz bandwidth from band edge. The band edges was measured and recorded.

### 5.7.3 EUT OPERATING CONDITION

The software provided by client to enable the EUT under transmission condition continuously at specific channel frequencies individually.

#### 5.7.4 TEST RESULTS (WITH ANTENNA 1)

For signals in the restricted bands above and below the 5.15 to 5.35GHz allocated band a measurement was made of the amplitude of the spurious emissions with respect to the intentional signals. The relative amplitude, in dBc, was applied to the average and peak field strength of the intentional signal made on the OATS to calculate the field strength of the unintentional signals.

The spectrum plots (Peak RBW=VBW=1MHz; Average RBW=1MHz, VBW=10Hz) are attached on the following pages.

**NOTE (Peak):**

The band edge emission plot on the following first page shows 42.68dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 1 is 106.4dBuV/m (Peak), so the maximum field strength in restrict band is  $106.4 - 42.68 = 63.72$ dBuV/m which is under 74dBuV/m limit.

The band edge emission plot on the following first page shows 45.43dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 8 is 108.2dBuV/m (Peak), so the maximum field strength in restrict band is  $108.2 - 45.43 = 62.77$ dBuV/m which is under 74dBuV/m limit.

**NOTE (Average):**

The band edge emission plot on the following second page shows 47.39dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 1 is 98.3dBuV/m (Average), so the maximum field strength in restrict band is  $98.3 - 47.39 = 50.91$ dBuV/m which is under 54dBuV/m limit.

The band edge emission plot on the following second page shows 48.89dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 8 is 98.8dBuV/m (Average), so the maximum field strength in restrict band is  $98.8 - 48.89 = 49.91$ dBuV/m which is under 54dBuV/m limit.

### 5.7.5 TEST RESULTS (WITH ANTENNA 2)

For signals in the restricted bands above and below the 5.15 to 5.35GHz allocated band a measurement was made of the amplitude of the spurious emissions with respect to the intentional signals. The relative amplitude, in dBc, was applied to the average and peak field strength of the intentional signal made on the OATS to calculate the field strength of the unintentional signals.

The spectrum plots (Peak RBW=VBW=1MHz; Average RBW=1MHz, VBW=10Hz) are attached on the following pages.

**NOTE (Peak):**

The band edge emission plot on the following first page shows 44.63dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 1 is 106.1dBuV/m (Peak), so the maximum field strength in restrict band is  $106.1 - 44.63 = 61.47$ dBuV/m which is under 74dBuV/m limit.

The band edge emission plot on the following first page shows 45.47dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 8 is 109.6dBuV/m (Peak), so the maximum field strength in restrict band is  $109.6 - 45.47 = 64.13$ dBuV/m which is under 74dBuV/m limit.

**NOTE (Average):**

The band edge emission plot on the following second page shows 49.04dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 1 is 97.3dBuV/m (Average), so the maximum field strength in restrict band is  $97.3 - 49.04 = 48.26$ dBuV/m which is under 54dBuV/m limit.

The band edge emission plot on the following second page shows 49.3dBc between carrier maximum power and local maximum emission in restrict band. The emission of carrier strength list in the test result of channel 8 is 101.2dBuV/m (Average), so the maximum field strength in restrict band is  $101.2 - 49.3 = 51.9$ dBuV/m which is under 54dBuV/m limit.

### 5.8.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100 kHz RBW and 100 kHz VBW. The 6 dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6 dB.

## 5.9 MAXIMUM PEAK OUTPUT POWER

### 5.9.1 LIMITS OF PEAK TRANSMIT POWER MEASUREMENT

The Maximum Peak Output Power Measurement is 30dBm.

**Note:**

1. Systems operating in the 5725-5850 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter peak output power.

### 5.9.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer.

Set the spectrum bandwidth span to view the entire spectrum.

Using peak detector and Max-hold function for Trace 1 (RB=1MHz, VB=3MHz) and 2 (RB=1MHz, VB=30KHz).

The largest difference between Trace 1 and Trace 2 in any 1MHz band on any frequency was recorded.

## **5.12 ANTENNA REQUIREMENT**

### **5.12.1 STANDARD APPLICABLE**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.407(a), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### **5.12.2 ANTENNA CONNECTED CONSTRUCTION**

The antenna used in this product are Dual-Band Omni-Directional antenna with RA MMCX Plug connector and Hige Gain Panel Directional antenna with rp-SMA and SMA connector.

Dual-Band Omni-Directional antenna: The maximum Gain of the antenna is 6.5dBi.  
Hige Gain Panel Directional antenna: The maximum Gain of the antenna is 14.0dBi.
