To: Denis Lalonde
Subject: Nortel Networks AB6NTHV45AA Hand Held 15.231

Denis,

I have taken a quick look at the file you uploaded yesterday, and have the following comments:

- 1.) Please provide separate confidentiality request from cover letter.
- 2.) Please provide better photographs for the internal photos. All RF shielding must be removed, and back as well as front of board must be photographed. Clarity must be clear and of sufficient detail to identify individual parts or sub assemblies.
- 3.) External photos must show front, back, and top (antenna side). Orthographic projection preferred.
- 4.) Please provide antenna description and/or attestation for 15.203 antenna requirement. Please be sure to identify antenna mount.
- 5.) There is no data presented for radiated spurious emissions to the 10th harmonic per 15.33. This is the preferred method for demonstrating compliance with the restricted bands of 15.205.

Bill
