RE: FCC ID: ABLSH-G1000

Attention: Jon Hughes

I have a few comments on this Application.

1. Please note that Hitachi not Sprint is the applicant for this device. Consequently, Sprint has no authority to authorize modifications. This means that the non-modification statement in the manual is incorrect. While this only applies to the Part 15 portion, the statement needs to be correct. The easiest way to revise the statement is to change "approved in this document" to "approved by the party responsible for compliance". **XXX**
2. The manual states that to use the device in the lap the device must be in the soft case. How does the applicant prevent use of this device outside the soft case in this situation? Does the device shut down, does it stop operating? What is to prevent the user from not using the soft case in the lap position? Please explain. **FCC EMAIL CORRESPONDENCE PROVIDED**
3. The manual needs to inform the user of the distances required for SAR compliance. This would appear to be 2.3cm for body worn and 1cm for laptop use. Please revise the manual to provide this information. **XXX**
4. The actual levels of measured the highest SAR is to be in the manual. Please provide the insert sheet or the manual page that informs the user of these highest SAR levels. **XXX**
5. PCS part 24 devices are to have radiated emissions done using the antenna substitution method. Section 4.1 of the report is not an antenna substitution test method. Please revise the report to properly show the substitution method for radiated spurious emissions as shown is EIA/TIA603 and in the data table for radiated emissions in the report. **XXX**
- 6.

A handwritten signature in black ink that reads "Dennis Ward".
