

Report No. 275367-17-R01

# **Test Report**

Product UPCS Base Station with BT Transceiver

Name and address of the

applicant

Panasonic Corporation of North America

Two Riverfront Plaza, 9<sup>th</sup> Floor Newark, 07102-5490, NJ, USA

Name and address of the

manufacturer

Panasonic Corporation

1-62, 4-chome, Minoshima, Hakata-ku

Fukuoka, 812-8531, Japan

Model KX-TGF380 / KX-TGF380C

Rating 120V 60Hz (Input: 120V ~60Hz 0.1A; Output: 5.5V 0.5A, 2.75W)

Trademark Panasonic

Serial number /

Additional information DECT 6.0, Bluetooth

Tested according to FCC Part 15, subpart D

Isochronous UPCS Device, 1920 – 1930 MHz

Industry Canada RSS 213, Issue 3

2 GHz License-exempt Personal Communications Service Devices (LE-PCS)

Order number 440845

**Tested in period** 2014.11.27 to 2014.12.15 and 2021.06.16

**Issue date** 2021.06.25

Name and address of the testing laboratory

Nemko

Instituttveien 6 Kjeller, Norway CAB Number: FCC: NO0001 ISED: NO0470

TEL: +47 22 96 03 30 FAX: +47 22 96 05 50

| Hardware identity and/or version:   | PNLB2420  |
| Software identity and/or version :  | SW400   |
| Tested to IC Radio Standard (RSS) : | RSS-213 Issue 2, RSS-GEN Issue 4                    |
| Test Site IC Reg. Number :          | IC 2040D-1  |
| Frequency Range :                   | 1921.536 – 1928.448 MHz                             |
| Number of Channels :                | 5 RF Channels, 5x12 = 60 TDMA Duplex Channels       |
| Type of Modulation :                | Digital (Gaussian Frequency Shift Keying)           |
| Conducted Output Power :            | 42 mW (Burst Power)                                 |
| Antenna Connector :                 | None  |
| Number of Antennas :                | 2   |
| Antenna Diversity Supported :       | Yes   |
| Power Supply :                      | AC Adaptor PNLV226                                  |
| Interface :                         | PSTN  |

# 1.2 Description of Tested Device

The EUT is a DECT Base Station and is a responding device as described in ANSI C63.17 and is designed to operate together with a DECT Handset, which is the initiating device.

The EUT also have a Bluetooth module, this report cover only the DECT part.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

#### 1.3 Test Environment

Temperature: 20.3 – 23.9 °C
Relative humidity: 26 – 43 %
Normal test voltage: 120 V AC

The values are the limit registered during the test period.

## 1.4 Test Engineer(s)

Frode Sveinsen

## 1.5 Test Equipment

See list of test equipment in clause 6.

#### 1.6 Other Comments

The Monitoring and Time and Spectrum Window Access tests were performed with Test Set-Up 6 (Ref. clause 5). A clock signal from the companion device was used to synchronize the Pulse Pattern Generator and the Spectrum Analyzer to the start of the DECT time window. The EUT was limited by administrative commands to operate on only two frequency carriers. For the tests where the EUT was required to operate on only one frequency carrier, one carrier was blocked by applying a CW interfering signal from RF Generator 3. The Pulse Pattern Generator was used to apply time synchronized interference to time windows where this was required.

Since the EUT was programmed to operate on only two RF carriers, it was only necessary with two RF generators for the monitoring tests, however a third generator was applied for the tests that required specific time slots to be blocked.

The tested EUT supports both normal DECT slot length and DECT Long slot. Long slot is an extended DECT slot that allows a higher data rate for bit rates higher than 32kbps.

This EUT supports Least Interfered Channel procedure (LIC), the Monitoring and Time and Spectrum Window Access tests were conducted as specified for EUTs that support LIC procedure.

All tests except Power-Line Conducted Emissions were performed in conducted mode with a temporary antenna connector.

Power-Line Conducted Emissions have been re-tested in 2021 on a sample with new BT module.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 2 TEST REPORT SUMMARY

#### 2.1 General

All measurements are traceable to national standards.

The tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC CFR47 Part 15D for Isochronous UPCS Devices and Industry Canada RSS-213 Issue 3 / RSS-GEN Issue 3.

All tests were conducted is accordance with ANSI C63.4-2014 and ANSI C63.17-2013. Antenna Gain tests were made in a 3m fully-anechoic chamber.

A description of the test facility is on file with the FCC and Industry Canada.

## 3 TEST RESULTS

## 3.1 Power Line Conducted Emissions

FCC Part 15.107 (a)

ISED RSS-Gen Issue 5, Clause 7.2

ISED ICES-003 Issue 7, Clause 3.2.1

Measurement procedure: ANSI C63.4-2014 using 50  $\mu$ H/50 ohms LISN.

Test Results: Complies

Measurement Data: See attached plots

Tested with AC Adaptor PNLV226

## Highest measured value (L1 and N):

## Handset Charging, 120V 60Hz:

| Frequency<br>(MHz) | QuasiPeak<br>(dBµV) | Average<br>(dBµV) | Limit<br>(dBµV) | Margin<br>(dB) | Meas. Time<br>(ms) | Bandwidth<br>(kHz) | Line | Filter |
|--------------------|---------------------|-------------------|-----------------|----------------|--------------------|--------------------|------|--------|
|                    |                     |                   |                 |                |                    |                    |      |        |

#### Active Call, 120V 60Hz:

| Frequency<br>(MHz) | QuasiPeak<br>(dBµV) | Average<br>(dBµV) | Limit<br>(dBµV) | Margin<br>(dB) | Meas. Time<br>(ms) | Bandwidth (kHz) | Line | Filter |

| Lower Band Edge | 1920.000        |

Requirement: FCC 15.303 (d), (g)

Within 1920 -1930 MHz band for isochronous devices.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.4 Automatic Discontinuation of Transmission

| Does the EUT transmit Control and Signaling Information? |                     | ⊠ YES □ NO          |  |
|--|---------------------|---------------------|--|
| TYPE OF EUT :  | ☐ INITIATING DEVICE | ☑ RESPONDING DEVICE |  |

The following tests simulate the reaction of the EUT in case of either absence of information to transmit or operational failure after a connection with the companion device is established.

| Number | Test                                | EUT Reaction | Verdict |
|--------|-------------------------------------|--------------|---------|
| 1      | Power removed from EUT              | А            | Pass    |
| 2      | Switch Off EUT                      | N/A          | Pass    |
| 3      | Hook-On by EUT                      | N/A          | Pass    |
| 4      | Power Removed from Companion Device | В            | Pass    |
| 5      | Switch Off Companion Device         | В            | Pass    |
| 6      | Hook-On by Companion Device         | В            | Pass    |

- A Connection breakdown, Cease of all transmissions
- B Connection breakdown, EUT transmits control and signaling information
- C Connection breakdown, Companion Device transmits control and signaling information
- N/A Not Applicable (EUT does not have On/Off switch and cannot perform Hook-On)

#### Requirements, FCC 15.319(f)

The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude transmission of control and signaling information or use of repetitive codes used by certain digital technologies to complete frame or burst intervals.

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.5 Peak Power Output

**Test Method:** 

ANSI C63.17, clause 6.1.2.

**Test Results: Complies** 

#### **Measurement Data:**

#### **Maximum Conducted Output Power**

| Channel No. | Frequency<br>(MHz) | Maximum<br>Conducted<br>Output Power<br>(dBm) | Maximum<br>Antenna<br>Gain<br>(dBi) | Maximum<br>Radiated<br>Output Power<br>(dBm) |
|-------------|--------------------|---|-------------------------------------|--|
| 4           | 1921.536           | 16.2  | 2.5*                                | 18.7   |
| 2           | 1924.992           | 16.2  | 2.5*                                | 18.7   |
| 0           | 1928.448           | 16.2  | 2.5*                                | 18.7   |

<sup>\*</sup>Antenna Gain is value declared by manufacturer

For this test it was also checked that input voltage variation of 85 and 115% of nominal value did not have any effect on the measured output power.

#### Limit:

Conducted: 100 µW x SQRT(B) where B is the measured Emission Bandwidth in Hz

FCC 15.319(c)(e): 20.8 dBm (119 mW) RSS-213, Issue 2: 20.5 dBm (111 mW)

The antenna gain is below 3 dBi, no reduction in transmit power is necessary.

## Requirements, FCC 15.319(c)(e); RSS-213, Issue 2; RSS-GEN, Issue 4

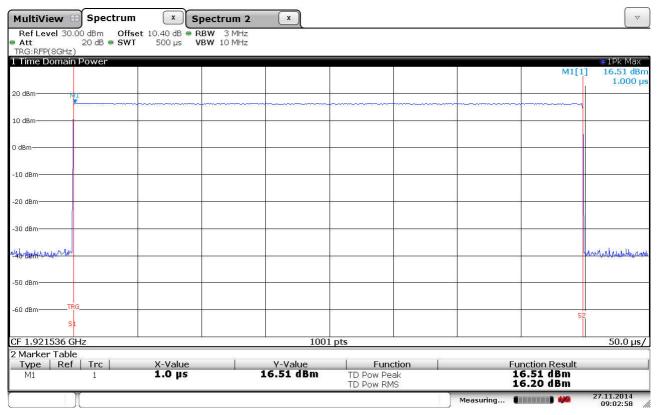

Peak transmit power shall not exceed 100 microwatts multiplied by the square root of the emission bandwidth in Hertz.

The peak transmit power shall be reduced by the amount in decibels that the maximum directional gain of the antenna exceeds 3 dBi.

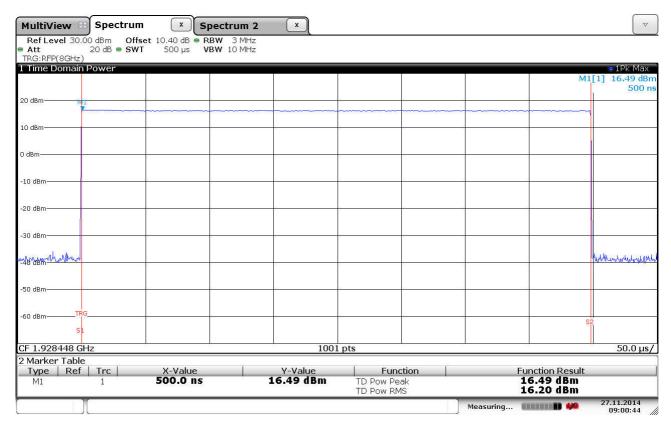

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.10 Carrier Frequency Stability

#### **Test Method:**

ANSI C63.17, clause 6.2.1.

**Test Results: Complies** 

#### **Measurement Data:**

The Frequency Stability is measured with the CMD60. The CMD60 was logged by a computer programmed to get new readings as fast as possible (about 3 readings per second) over the noted time period or number of readings. The peak-to-peak difference was recorded and the mean value and deviation in ppm was calculated.

The Carrier Frequency Stability over Power Supply Voltage and over Temperature is measured with a Frequency Domain Analyzer in histogram mode.

#### **Carrier Frequency Stability over Time at Nominal Temperature**

| Average Mean Carrier<br>Frequency (MHz) | Max. Diff.<br>(kHz) | Min. Diff.<br>(kHz) | Max. Dev.<br>(ppm) | Limit   |
|---|---------------------|---------------------|--------------------|---------|
| 1924.991589                             | 0.612               | -1.483              | -0.6               | ±10 ppm |

Deviation ppm = ((Diff. - Mean Diff) / Mean Carrier Freq.) x 10<sup>6</sup>

Deviation (ppm) is calculated from 3000 readings.

#### Frequency Stability over Power Supply Voltage at Nominal Temperature

| Voltage                  | Measured Carrier<br>Frequency (MHz) | Difference<br>(kHz) | Deviation<br>(ppm) | Limit   |
|--------------------------|-------------------------------------|---------------------|--------------------|---------|
| V <sub>nom</sub>         | 1924.984017                         | 0                   | 0                  |         |
| 85% of V <sub>nom</sub>  | 1924.983617                         | -0.4                | -0.2               | ±10 ppm |
| 115% of V <sub>nom</sub> | 1924.983460                         | -0.6                | -0.3               |         |

Deviation ppm = ((Mean – Measured Frequency) / Mean) x 10<sup>6</sup>

#### **Frequency Stability over Temperature**

| Temperature | Measured Carrier<br>Frequency (MHz) | Difference<br>(kHz) | Deviation (ppm) | Limit   |
|-------------|-------------------------------------|---------------------|-----------------|---------|
| T = +20 °C  | 1924.984017                         | 0                   | 0               |         |
| T = -20 °C  | 1924.987836                         | 3.8                 | 2.0             | ±10 ppm |
| T = +50 °C  | 1924.971949                         | -12.1               | -6.3            |         |

Deviation ppm = ((Mean – Measured Frequency) / Mean) x 10<sup>6</sup>

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.11 Frame Repetition Stability

#### **Test Method:**

ANSI C63.17, clause 6.2.2.

**Test Results: Complies** 

#### **Measurement Data:**

The envelope of the RF signal from the EUT is detected with a Crystal Detector and the mean and standard deviation of the frame repetition frequency is then gated over 100 frames and measured with a Frequency Domain Analyzer. The frame repetition stability is 3 times the standard deviation.

| Carrier Frequency<br>(MHz) | Mean<br>(Hz) | Standard Deviation (µHz) | Frame Repetition Stability (ppm) |
|----------------------------|--------------|--------------------------|----------------------------------|
| 1924.992                   | 100.000      | 1.55                     | 0.046                            |

#### Limit:

| Frame Repetition Stability | ±10 ppm (TDMA) |
|----------------------------|----------------|
|----------------------------|----------------|

## 3.13 Monitoring Threshold, Least Interfered Channel

## **Monitoring Threshold Limits:**

Threshold Level:

 $T_L = -174 + 10 \log B + 30 + P_{MAX} - P_{EUT}$  (dBm)

B is measured Emission Bandwidth (FCC 15.323) or Occupied Bandwidth (RSS-213 Issue 3) in Hz  $P_{\text{MAX}}$  is the power limit in dBm

P<sub>EUT</sub> is measured Transmitter Power in dBm

#### Calculated values:

|                                   | FCC 15.323, RSS-213 Issue 3, clause 5.2 |
|-----------------------------------|---|
| Threshold Level (FCC 15.323)      | -78.0 dBm                               |
| Threshold Level (RSS-213 Issue 3) | -78.8 dBm                               |

Least Interfered Channel Procedure (LIC) may only be used by systems with more than 20 duplex system access channels. Systems with less than 20 duplex system access channels are not allowed to transmit when interferer level is above Threshold Level.

## **Measurement Procedure:**

| Test only when Least Interfered Channel Procedure is NOT used: |     |                            |
|--|-----|----------------------------|
| Lower Threshold  | N/A | The EUT uses LIC procedure |

#### Least Interfered Channel (LIC) Procedure Test, FCC 15.323(b), (c)(2) and (c)(5)

| ANSI C63.17 clause 7.3.2 ref.  | Observation                           | Verdict |
|--|---------------------------------------|---------|
| b) $f_1$ at $T_L + U_M + 7$ dB, $f_2$ at $T_L + U_M$   | Transmission always on $f_2$          | Pass    |
| c) $f_1$ at T <sub>L</sub> + U <sub>M</sub> , $f_2$ at T <sub>L</sub> + U <sub>M</sub> +7 dB | Transmission always on $f_I$          | Pass    |
| d) $f_1$ at $T_L + U_M + 1$ dB, $f_2$ at $T_L + U_M - 6$ dB                                  | Transmission always on f <sub>2</sub> | Pass    |
| e) $f_1$ at $T_L + U_M - 6$ dB, $f_2$ at $T_L + U_M + 1$ dB                                  | Transmission always on $f_I$          | Pass    |

#### Selected Channel Confirmation, FCC 15.323(c)(1) and (5)

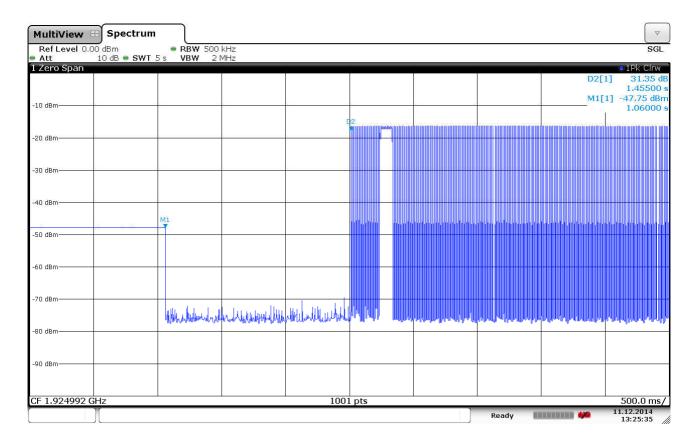

| ANSI C63.17 clause 7.3.3       | Observation            | Verdict |
|--------------------------------|------------------------|---------|
| b) Shall not transmit on $f_I$ | EUT transmits on $f_2$ | Pass    |
| d) Shall not transmit on $f_2$ | EUT transmits on $f_I$ | Pass    |

#### Limits:

|   | FCC 15.323, RSS-213 Issue 3, clause 5.2 |
|---|---|
| Threshold Level + 6 dB margin (FCC 15.323)      | -72.0 dBm                               |

7.3.4 Selected Channel Confirmation, Connection 1.5s After Interferer Removed

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.14 Threshold Monitoring Bandwidth

This test is only required if a dedicated monitoring receiver is used. However, if the test is not carried out the manufacturer shall declare and provide proper evidence that the monitoring is made through the radio receiver used for communication.

#### **Measurement Procedure:**

Simple Compliance Test, ANSI C63.17, clause 7.4.1

More Detailed Test, ANSI C63.17, clause 7.4.2

The test is passed if either the Simple Compliance Test or the More Detailed test is passed.

During this test the spectrum analyzer is observed visually to see if the EUT transmits or not.

#### **Test Results:**

| Test performed                       | Observation | Verdict |
|--------------------------------------|-------------|---------|
| Simple Compliance test, at ±30% of B | N/A         | N/A     |
| More Detailed Test, at -6 dB points  | N/A         | N/A     |
| More Detailed Test, at -12 dB points | N/A         | N/A     |

The more detailed test must be pass at both the -6 and -12 dB points if the Simple Compliance test fails.

**Comment:** The manufacturer declares that the tested EUT uses the same receiver for monitoring and communication, this test is therefore not required.

## Limits, FCC 15.323(c)(7):

The monitoring system bandwidth must be equal to or greater than the emission bandwidth of the intended transmission.

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.15 Reaction Time and Monitoring Interval

#### **Measurement Procedure**

ANSI C63.17, clause 7.5

#### Test results:

By administrative commands and out-of-operating region interference, the EUT is restricted to operate on two RF carrier frequencies.

A CW interferer signal at a level  $T_L$  is applied on  $f_I$  and time-synchronized pulsed interference at a level  $T_L$  +  $U_M$  dB is applied on  $f_2$ . The level on  $f_2$  was raised 6 dB for part d) with 35  $\mu$ s pulses.

The pulses are synchronized with the EUT timeslots and applied centered within all timeslots.

For both tests the test is passed if the EUT transmits on  $f_l$ .

| Pulse Width, ref. to ANSI C63.17 clause 7.5  | Observation            | Verdict |
|--|------------------------|---------|
| c) > largest of 50 µs and 50*SQRT(1.25/B)  | EUT transmits on $f_1$ | Pass    |
| d) > largest of 35 μs and 35*SQRT(1.25/ <i>B</i> ),<br>and with interference level raised 6 dB | EUT transmits on $f_I$ | Pass    |

**Comment:** Since B is larger than 1.25 MHz the test was performed with pulse lengths of 50  $\mu$ s and 35  $\mu$ s.

## Limits, FCC 15.323(c)(1), (5) and (7)

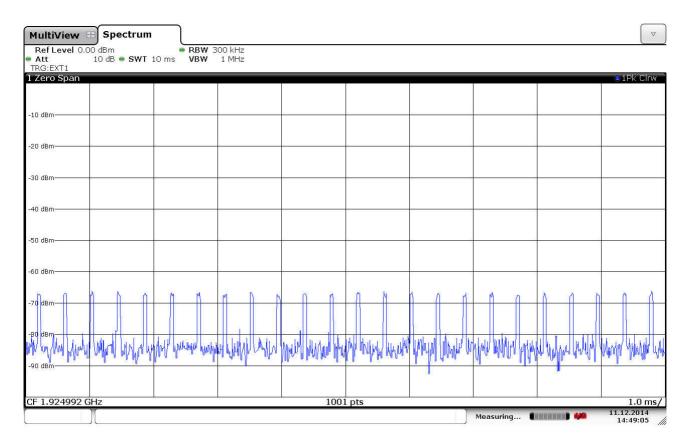

The maximum reaction time must be less than 50xSQRT (1.25/emission bandwidth in MHz) microseconds for signals at the applicable threshold level but shall not be required to be less than  $50 \mu s$ .

If a signal is detected that is 6 dB or more above the applicable threshold level, the maximum reaction time shall be 35xSQRT (1.25/emission bandwidth in MHz) microseconds but shall not be required to be less than  $35 \, \mu s$ .

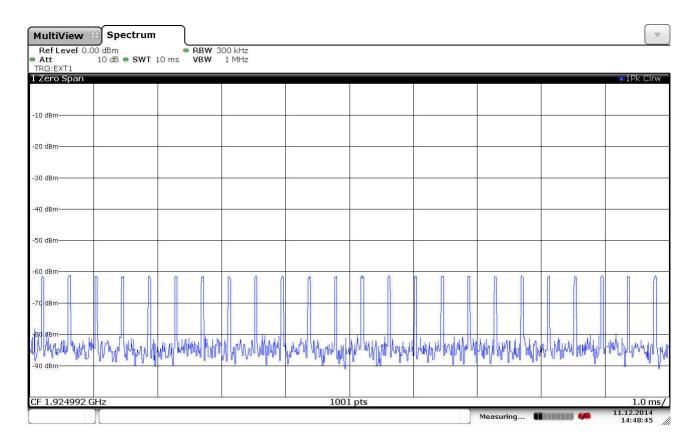

## 50 µs Pulses

## 35 µs Pulses

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.16 Time and Spectrum Window Access Procedure

This requirement is only for EUTs which transmit unacknowledged control and signaling information.

#### **Measurement Procedure:**

Timing for EUTs using control and signaling channel type transmissions: ANSI C63.17, clause 8.1

#### Test results:

| Access Criteria, ref. to ANSI C63.17 clause 8.1.1   | Observation                                      | Verdict |
|---|--|---------|
| b) Check that the EUT transmits on the interference free time-slot  | EUT transmits on the interference free time-slot | Pass    |
| b) The EUT must terminate or pause in its repetitive transmission of the control and signalling channel on the open channel to repeat the access criteria not less frequently than every 30 s | Transmission paused every 1.28 s                 | Pass    |

#### If FCC 15.323(c)(6) option, If Random Waiting Interval is NOT implemented

| Access Criteria, ref. to ANSI C63.17 clause 8.1.2  | Observation   | Verdict |
|--|---|---------|
| b) Check that the EUT changes to an interference-free slot when interference is introduced on the time slot in use | EUT changes to the interference-free time-slot, and stays there | Pass    |

#### If FCC 15.323(c)(6) option, Only if Random Waiting Interval is implemented

| Access Criteria, ref. to ANSI C63.17 clause 8.1.3  | Observation | Verdict |
|--|-------------|---------|
| b-d) Check that the EUT uses random waiting interval before continuing transmission on an interfered time slot | N/A         | N/A     |

Comment: The tested EUT does not support the Random Waiting Interval option.

#### Limits:

#### FCC 15.323(c)(4):

Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease. Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgement, at which time the access criteria must be repeated.

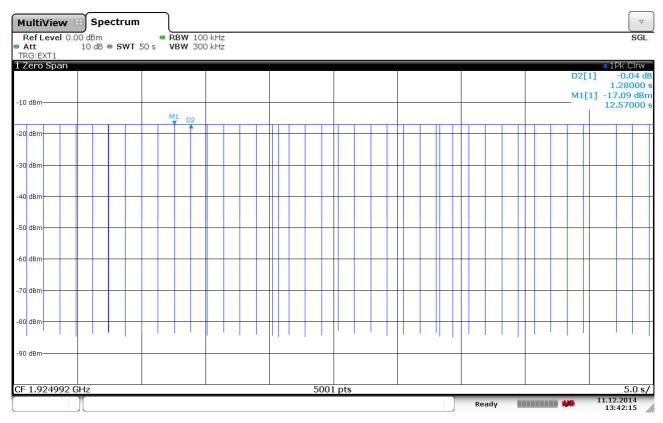

#### FCC 15.323(c)(6):

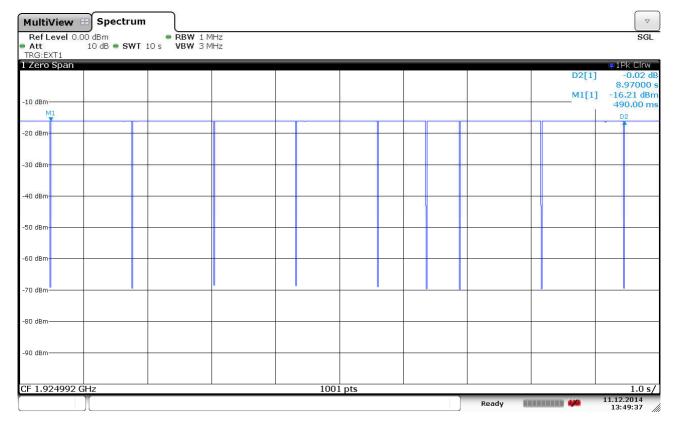

If the selected combined time and spectrum windows are unavailable, the device may either monitor and select different windows or seek to use the same windows after waiting an amount of time, randomly chosen from a uniform random distribution between 10 and 150 milliseconds, commencing when the channel becomes available

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## **Access Criteria Check**

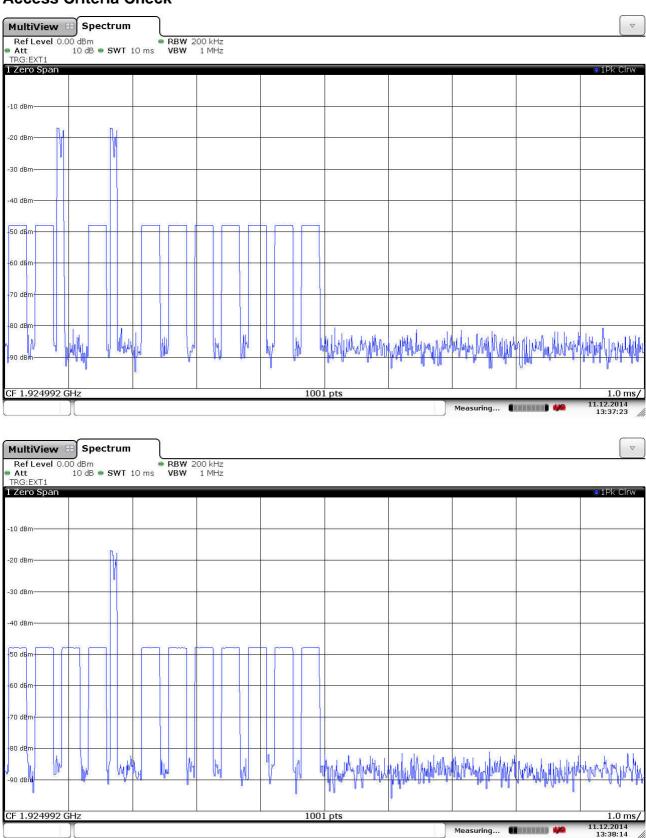

## 8.1.1b) Access Criteria Check Interval

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## **Access Criteria Check**

8.1.2b) Access Criteria Functional Test, Before and After

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.17 Acknowledgements and Transmission Duration

#### **Measurement Procedure:**

Acknowledgements: ANSI C63.17, clause 8.2.1

Transmission Duration: ANSI C63.17, clause 8.2.2

During the test **Initial transmission without acknowledgements** the signal from the EUT to the companion device is blocked by circulators in addition to the tunable attenuator.

The test **Transmission time after loss of acknowledgements** is performed by cutting-off the signal from the companion device by a RF switch and measuring the time until the EUT stops transmitting.

The **Transmission Duration** test is performed by monitoring the slot in use and measuring the time until the EUT changes to a different slot.

#### **Test Results:**

#### **Acknowledgements**

| Test ref. to ANSI C63.17 clause 8.2.1               | Observation   | Verdict |
|---|---|---------|
| a) Initial transmission without acknowledgements    | Not applicable for EUT that transmits control and signaling information | N/A     |
| c) Transmission time after loss of acknowledgements | 10 sec  | Pass    |

#### **Transmission Duration**

| Test ref. to ANSI C63.17 clause 8.2.2                      | Observation  | Verdict |
|--|--|---------|
| b) Transmission duration on same time and frequency window | Only for initiating device that controls which time slot is used | N/A     |

Comment: /

#### Limits, FCC 15.323(c)(3) and (4)

Occupation of the same combined time and spectrum windows by a device or group of cooperating devices continuously over a period of time longer than 8 hours is not permitted without repeating the access criteria.

Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease.

Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgement, at which time the access criteria must be repeated.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

#### 3.18 Dual Access Criteria Check

#### **Measurement Procedure:**

EUTs that does not implement the LIC procedure: ANSI C63.17, clause 8.3.1

EUTs that implement the LIC procedure: ANSI C63.17, clause 8.3.2

This test is required for equipment that uses the access criteria in FCC 15.323(c)(10).

#### **Test Results:**

#### **EUTs that do NOT implements the LIC procedure:**

| Test ref. to ANSI C63.17 clause 8.3.1  | Observation | Verdict |
|--|-------------|---------|
| b) EUT is restricted to a single carrier $f_l$ for TDMA systems. The Test is Pass if EUT can transmit  | N/A         | N/A     |
| c) d) Interference at level T <sub>L</sub> + U <sub>M</sub> on all timeslots except one <b>receive</b> slot where interference is at least 10 dB below T <sub>L</sub>  | N/A         | N/A     |
| e) f) Interference at level T <sub>L</sub> + U <sub>M</sub> on all timeslots except one <b>transmit</b> slot where interference is at least 10 dB below T <sub>L</sub> | N/A         | N/A     |

#### **EUTs that implements the LIC procedure:**

| Test ref. to ANSI C63.17 clause 8.3.2   | Observation | Verdict |
|---|-------------|---------|
| b) EUT is restricted to a single carrier $f_l$ for TDMA systems. The Test is Pass if EUT can transmit | N/A         | N/A     |
| c) d) Transmission on interference-free <b>receive</b> time/spectrum window                           | N/A         | N/A     |
| e) f) Transmission on interference-free <b>transmit</b> time/spectrum window                          | N/A         | N/A     |

Comment: This test is only applicable for EUT that can be initiating device.

## Limits, FCC 15.323(c)(10)

An initiating device may attempt to establish a duplex connection by monitoring both its intended transmit and receive time and spectrum windows. If both the intended transmit and receive time and spectrum windows meet the access criteria, then the initiating device can initiate a transmission in the intended transmit time and spectrum window. If the power detected by the responding device can be decoded as a duplex connection signal from the initiating device, then the responding device may immediately begin transmitting on the receive time and spectrum window monitored by the initiating device.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 3.19 Alternative Monitoring Interval

Test procedure described in ANSI C63.17 clause 8.4.

This test is required if the EUT implements the provisions of FCC 15.323(c)(11).

#### Test result:

Not Tested. The tested EUT does not implement this provision. See manufacturers' declaration.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

# 4 Measurement Uncertainty

| Measurement Uncertainty Values                             |                |         |
|--|----------------|---------|
| Test Item  | Uncertainty    |         |
| Output Power   | ±0.5 dB        |         |
| Power Spectral Density                                     | ±0.5 dB        |         |
| Out of Band Emissions, Conducted (RBW < 100 kHz) < 3.6 GHz |                | ±0.6 dB |
|  | > 3.6 GHz      | ±0.9 dB |
| Spurious Emissions, Radiated                               | < 1 GHz        | ±2.5 dB |
|  | > 1 GHz        | ±2.2 dB |
| Emission Bandwidth   | ±4 %           |         |
| Power Line Conducted Emissions                             | +2.9 / -4.1 dB |         |
| Spectrum Mask Measurements Frequency                       |                | ±5 %    |
|  | Amplitude      | ±1.0 dB |
| Frequency Error  | ±0.6 ppm       |         |
| Timing and Jitter Measurements                             | ±2.0 ns        |         |
| Frame Timing Measurements                                  | ±1.4 ppm       |         |
| Receiver Blocking Levels                                   | ±1.0 dB        |         |
| Temperature Uncertainty                                    | ±1 °C          |         |

All uncertainty values are expanded standard uncertainty to give a confidence level of 95%, based on coverage factor k=2

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 5 Test Setups

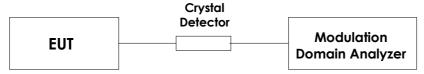

## 5.1 Frequency Measurements

#### Test Set-up 1

This setup is used for measuring Carrier frequency stability at normal and extreme temperatures.

## **5.2** Timing Measurements

#### Test Set-up 2

This setup is used for measuring Frame repetition stability, Frame period and Jitter.

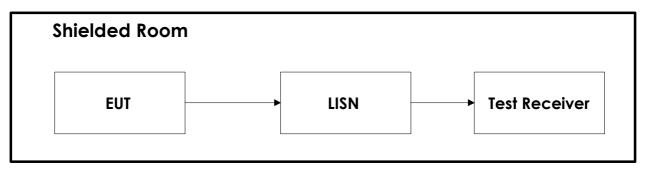

## 5.3 Conducted Emission Test

## Test Set-up 3

This setup is used for all conducted emission tests.

## 5.4 Power Line Conducted Emissions Test

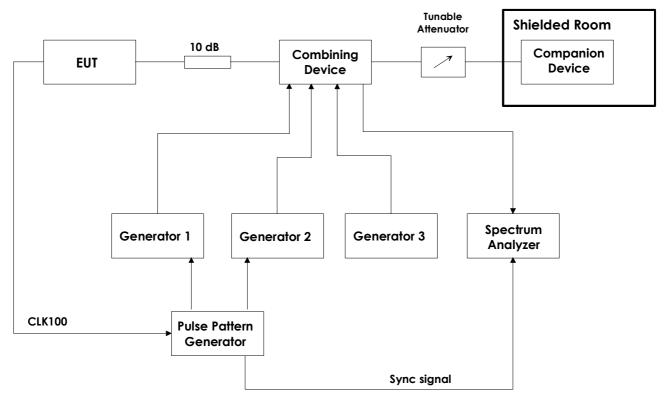

Test equipment: 18, 25, 26, 27

Test Set-Up 5

Report no.: 440845-17-R01 FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

## 5.5 Monitoring Tests

#### Test Set-Up 6

This test setup is used for all Monitoring and Time and Spectrum Access Procedure tests. The path loss from the signal generators to the EUT is measured with a power meter before the testing is started.

The CLK100 is used to synchronize the Pulse-/ Pattern generator to the start of the DECT frame, this signal always comes from the base station. If the EUT is a DECT Portable Part (i.e. a handset) the CLK100 signal will come from the Companion Device.

The sync signal to the Spectrum Analyzer is the CLK100 signal that is regenerated in the Pulse-/ Pattern Generator, this is used to synchronize the Spectrum Analyzer to the DECT frame when in zero span. The Pulse-/ Pattern Generator is used for tests that require time synchronized pulses or blocking of specific time slots.

FCC ID: ACJ96NKXTGF380A IC: 216A-KXTGF380A

# 6 Test Equipment Used

To facilitate inclusion on each page of the test equipment used for related tests, each item of test equipment and ancillaries are identified (numbered) by the Testhouse.

| No. | Model number | Description                | Manufacturer Ref. no     |                         | Cal. date  | Cal. Due   |
