Re: Class II Permissive Change Application for Panasonic Single Modular Model WL16B under  
FCC ID: ACJ9TGWL16B / Certified Under FCC Parts 15B, 15C and 15E  
for Installation within Panasonic Personal Computer Model FZ-M1

To whom it may concern:

We, Panasonic Corporation of North America performed SAR test to mount the module WL16B into the portable Host (Panasonic Detachable PC Model FZ-M1). However, the Radiated emission testing was not additionally performed due to the following:

- The original FCC testing of the module WL16B was performed when the antenna was connected to the module in an open environment. Under this application, the WL16B itself and its antennas were installed inside the Detachable PC enclosure. The physical restraints introduced by the Detachable PC enclosure would result in equal or lower level of radiated emission.
- The original FCC testing of the module WL16B was performed with an antenna of higher gain (2.4GHz: 3.24dBi, 5.15-5.35GHz: 3.73dBi, 5.47-5.725GHz: 4.77dBi, 5.725-5.85GHz: 4.77dBi). Both WLAN MAIN antenna (Type: PIFA) and WLAN AUX antenna (Type: PIFA) are the same type as the original ones but have lower gain across level of radiated emission.

Sincerely,

Ben Botros  
Project Manager  
Panasonic Corporation of North America  
Product Safety & Compliance Department
