Re: Class II Permissive Change Application for Panasonic Single Modular Model WL23B  
under FCC ID: ACJ9TGWL23B / Certified under FCC Parts 15C, 15E  
For Installation within Panasonic Personal Computer Model FZ-40(mk2)  
(Original approval date: February 8, 2024 – Change in ID)

To whom it may concern:

We, Panasonic Corporation of North America performed SAR evaluation to mount the module WL23B into the portable host (Panasonic PC Model FZ-40(mk2)). The radiated emission testing was not additionally performed due to the following reasons:

- The original FCC testing of the module WL23B was performed when the antenna was connected to the module in an open environment. Under this application, the WL23B itself and its antennas installed inside the host PC enclosure. The physical restraints introduced by the host PC enclosure should have resulted in equal or lower level of radiated emission.
- The original FCC testing of the module WL23B was performed with an antenna of higher gain (2.4GHz: 2.95 dBi, 5GHz: 5.15 dBi, 6GHz: 5.02 dBi). Both WLAN MAIN antenna (Type: PIFA) and WLAN AUX antenna (Type: PIFA) are the same type as the original ones but have lower gain across level of radiated emission.

Thank you for your attention in this matter.

Authorized by,

Ben Botros  
Manager – Regulatory & Compliance  
Panasonic Corporation of North America
