# 4. MAINTENANCE

 **WARNING**

 **ELECTRICAL SHOCK HAZARD**  
Do not open the equipment.

Only qualified personnel can work inside the equipment.

**NOTICE**

Do not apply paint, anti-corrosive sealant or contact spray to coating or plastic parts of the equipment.

Those items contain organic solvents that can damage coating and plastic parts, especially plastic connectors.

## 4.1 Maintenance

Regular maintenance helps good performance. Check the items listed below monthly to keep your equipment in good working order.

Item	Check point
Wiring	Check that each cable and wire are securely fastened. Refasten if necessary.
Ground	Check grounding for rust. Clean if necessary.
Antenna	Check antenna and its cabling for damage. Replace if necessary.
Cabinet	Dust and dirt should be removed from the cabinet with a soft, dry cloth. Do not use chemical-based cleaners; they can remove paint and markings.

## 4.2 Replacement of Fuse

 **WARNING**

**Use the correct fuse.**

Use of a wrong fuse can cause fire or serious damage to the equipment.

The fuse (5A) in the cable protects it from overcurrent and equipment fault. If the unit cannot be powered, that is, the POWER LED is off, the fuse may have blown. If this happens, turn off the power to the FA-70, and check the fuse. If the fuse has blown, find out the reason before replacing it. If it blows again after replacement, contact your dealer for advice.

Name	Type
Fuse (5A)	250VAC, 5A

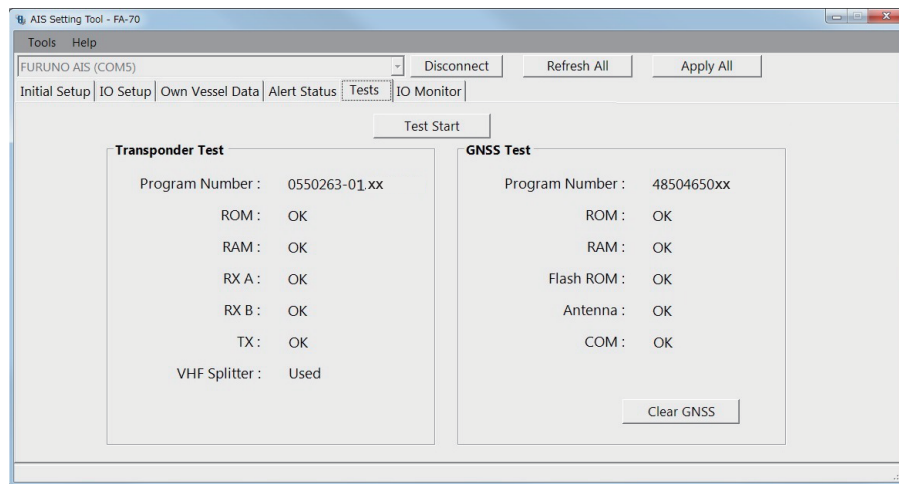

## 4.3 Troubleshooting

The troubleshooting table below provides typical operating problems and the means to restore normal operation. If you cannot restore normal operation, do not open the cover of the FA-70; there are no user serviceable parts inside the transponder.

Symptom	Remedy
