

2.2 Wiring the Power Supply Unit

Cabling

1. Unfasten four screws to remove the cable clamp.
2. Unfasten four screws to remove the cover.
3. Attach the connectors of three cables as shown in the figure below.

4. Lay three cables in respective slots referring to the figure above.
5. Reattach the cover and the cable clamp.
6. Connect a ground wire (local supply, IV-2sq) between the ground terminal and ship's ground.

Jumper block, slide switch setting

The jumper block JP1 and slide switch S112 on the PWR board (03P9419) must be set according to radar model. Open the unit, locate JP1 and S112 and set them as below.

Jumper block JP1
("short" for FR-8252 radar;
remove dummy connector and
attach connector assy.
XH2P-L40-ACR.)

Slide switch S112
(Upward position
for FR-8252)

Power supply unit, inside view

Jumper block, slide switch	Function	Setting
JP1	Enables/disables motor slow start circuit.	Short (disable)
S112	TUNE voltage selector (0-12 V, 0-32 V)	Upward position (0-12 V)

Power requirement, replacement of fuses

Power requirement

The power for the power supply unit and display unit must be drawn from the same power switch on the power terminal board.

Replacement of fuses

The power supply unit is shipped with a 15 A fuse(for connection to 12 VDC battery). Replace the fuse with a 7 A (supplied) when the ship's battery is 24 VDC.

2.3 Port for External Devices

External equipments can be connected here as shown below.

NMEA1(7P)	NMEA2(7P)	HDG (6P)	PC/EXT-BUZZER (7P)
NMEA sentence device	NMEA sentence device	Heading sensor	External buzzer, PC, etc.

This equipment can receive the following NMEA 0183 format sentences from other equipment. You will need the optional NMEA cable to connect with external equipment.

- Course: VTG> RMC
- Waypoint Range: BWR> BWC> RMB, Bearing: BWR> BWC (> RMB*¹)
- Heading (True): HDT> VHW> HDG*²> HDM*²> VHW*²
- Heading (Magnetic): HDG> HDM> VHW> HDT*²> VHW*²
- Ship's speed: Over ground: VTG>RMC> VHW, Through water: VHW
- Date: ZDA
- Time: ZDA
- Own ship's position: GNS>GGA>RMC> GLL
- Depth: DPT>DBT
- Wind speed and angle*³: True: MWV>VWT, Relative: MWV>VWR
- Water temperature: MTW

*1: Available when true bearing.

*2: Variation data is required.

*3: True or Relative is changed with menu.

3. SETTING UP THE EQUIPMENT

3.1 Setting Language

At the first power application after installation, choose a language as follows.

- 1. Press **⏻/BRILL** key to turn the power on.
"Now Initializing..." appears and after a while the window below appears.

Language	English
Language	Francais
Language	Espanol
Language	Deutsch
Language	Italiano
Language	Portugues
Language	Dansk
Language	Svensk
Language	Norsk
Language	Chinese
Language	Japanese
Language	Thai

- 2. Rotate the trackball to choose language desired and press the **ENTER** key.
The confirmation window appears.

- 3. Choose **Yes** and press the **ENTER** key.

3.2 Opening the Installation Menu

After you have installed the equipment, set it up as follows.

1. Press the **MENU** key. The main menu appears on the screen.
2. Rotate the trackball downward to choose **Installation**. The installation menu appears in gray to right side of the screen.
3. While pressing down the **CANCEL/HL OFF** key, press the **MENU** key five times to activate the Installation menu.

Menu	Installation
Mark	Language : English
Custom 1	Purpose : Sea
Custom 2	Type : 8062
Custom 3	View Position : Center
Tuning	Input Source : Main
GPS Buoy	Antenna Height : 5 m
Target	Heading Adjust : 0°
ARP	Manual Timing Adjust : 0
AIS	Tuning Initial Adjust
GPS	Manual MBS Adjust : 0
▼ System	Video Initial Adjust : 0
Initial	Auto Installation Setup**
Factory	Antenna Rotation : Rotate
Installation	Local Time Offset : - 0.1 H
Sector Blank 1**	Total TX Time* : 000000.5 h
	Total On Time* : 000000.6 h
	Memory Clear*
	[ENTER]: Enter [CANCEL/HL OFF]: Back
	[MENU]: Exit

* : Displayed when scrolled.

** : Set the Sector Blank to "Off" in order to execute Auto Installation Setup in the Installation menu.

4. Press the **ENTER** key. The highlighted cursor appears in the Installation menu.
5. Rotate the trackball downward or upward to choose an item in the Installation menu.
6. Press the **ENTER** key to show setting window.
7. Rotate the trackball downward or upward to choose an option.
8. Press the **ENTER** key to confirm setting.
9. Finally, press the **MENU** key to close the main menu.

Basic Settings

Language: Choose an appropriate language.

Purpose: Choose the purpose of this radar among River, Sea and IEC. The default setting is Sea.

River: To use this radar on a river.

Sea: To use this radar on high seas.

IEC: To use this radar as the type approved radar.

Type: Choose type of this radar among 8062 (6 kW radar), 8122 (12 kW radar) and 8252 (25 kW radar) to agree with the specifications of the antenna unit. The default setting is 8062. Unsuitable setting may result in malfunction.

View Position: Choose the operating position for this radar among Left, Left-Center, Center, Right-Center and Right to view echo colors correctly. The default setting is Center.

Left: When operating this radar at the left side.

Left-Center: When operating this radar at the left-center side.

Center: When operating this radar at center position.

Right-Center: When operating this radar at the right-center side.

Right: When operating this radar at the right side.

Approx. angle of the view position as follows.

Note: The radar echo and trail echo are adjusted by the View Position. The characters are not adjusted. This setting is also reflected on an external monitor (option).

Input Source: Choose the input source between Main and Sub. The default setting is Main.

Main: When using this display unit as main radar.

Sub: When using this display unit as sub display. For Sub, the “Video Initial Adjust” is required (page 3-6).

Antenna Height: Set the height of the antenna above the water surface among 5, 10, 15, 20, 30, 40 and 50 m. The default setting is 15 m.

Antenna Rotation: “Rotate,” the default setting, stops transmission when the antenna is not rotating. “Stop” transmits radar pulses without rotating the antenna.

Local Time Offset: To display local time on the screen, set the time difference from the UTC.

Memory Clear: Restore the default settings. However, Purpose, Type, View Position and Input Source are not restored.

Heading Adjustment

You have mounted the antenna unit facing straight ahead in the direction of the bow. Therefore, a small but conspicuous target dead ahead visually should appear on the heading line (zero degrees).

In practice, you will probably observe some small error on the display because of the difficulty in achieving accurate initial positioning of the antenna unit. The following adjustment will compensate for this error.

1. Set ship’s heading toward a suitable target (for example, ship or buoy) at a range between 0.125 and 0.25 nautical mile.

3. SETTING UP THE EQUIPMENT

2. Transmit the radar at 0.25 nm range and measure the bearing of that target relative to ship's heading with an EBL.
3. Open the Installation menu, and choose Heading Adjust.
4. Press the **ENTER** key to show the HEADING ADJUST window.

5. Rotate the trackball upward or downward to set the value measured at the step 2 above. Confirm that the target shows dead ahead on the screen.
6. Press the **ENTER** key to conclude the setting.

Auto Installation Setup

When this item is executed, the tuning, timing, video and MBS are automatically adjusted.

Note: Before executing this procedure, confirm that Sector Blank 1 and Sector Blank 2 are off.

1. Transmit the radar at 48 nm range.
2. Choose Auto Installation Setup from the installation menu and press the **ENTER** key.
3. Rotate the trackball to choose **Yes**, and then press the **ENTER** key.
Automatically, the tune adjustment begins, indicating "Tuning adjusting..." Then, the timing adjustment, video adjustment and MBS adjustment are executed automatically, indicating "Timing adjusting...", "Video adjusting...", and "MBS adjusting..." in that order. After the adjustment is completed, the window disappears.

If you are not satisfied with the result of the Auto Installation Setup, execute Manual Timing Adjust, Tuning Initial Adjust, Manual MBS Adjust and Video Initial Adjust as follows.

Tuning Initial Adjust

1. Transmit the radar at 48 nm range.
2. Open the Installation menu, and choose Tuning Initial Adjust.
3. Press the **ENTER** key to show the setting window.
4. Rotate the trackball to choose **Yes**, and then press the **ENTER** key. The tune adjustment begins, indicating "Tuning adjusting..." After the adjustment is completed, the window disappears.

Manual Timing Adjust

This adjustment ensures proper radar performance, especially on short ranges. The radar measures the time required for a transmitted echo to travel to the target and return to the source. The received echo appears on the display based on this time. Thus, at the instant the transmitter is fired, the sweep should start from the center of the display (sometimes called sweep origin.)

A trigger pulse generated in the display unit goes to the antenna unit through the signal cable to trigger the transmitter (magnetron). The time taken by the signal to travel up to the antenna unit varies, depending largely on the length of signal cable. During this period the display unit should wait before starting the sweep. When the display unit is not adjusted correctly, the echoes from a straight local object (for example, a harbor wall or straight pier) will not appear with straight edges – namely, they will be seen as “pushed out” or “pulled in” near the picture center. The range of objects will also be incorrectly shown.

Examples of improper and correct sweep timing

1. Transmit on the shortest range and confirm that gain and A/C SEA are properly adjusted.
2. Visually select a target which forms a straight line (harbor wall, straight piers).
3. Open the Installation menu and choose Manual Timing Adjust.
4. Press the **ENTER** key to show the setting window.
5. Rotate the trackball to straighten the target selected at step 2, and then press the **ENTER** key to finish.

3. SETTING UP THE EQUIPMENT

Manual MBS Adjust

Main bang (black hole), which appears at the display center on short ranges, can be suppressed as follows.

1. Transmit the radar on the short range.
2. Open the Installation menu and choose Manual MBS Adjust.
3. Press the **ENTER** key to show the setting window.
4. Rotate the trackball to suppress main bang (between 0 and 255).
5. Press the **ENTER** key to finish.

Video Initial Adjust

After completing Auto Installation Setup, you can fine tune the video signal.

1. Transmit the radar and set as follows.
Gain: one o'clock A/C Sea: zero A/C Rain: zero
Echo Average: Off Noise Rejecter: Off Interference Rejecter: Med.
2. Open the Installation menu and choose Video Initial Adjust.
3. Press the **ENTER** key to show the setting window.
4. Rotate the trackball to adjust the video so that the white noise slightly appears. The setting range is 0 to 31. The greater the value, the higher the gain.
5. Press the **ENTER** key to finish.

Note: If the display unit is used as a Sub-display, set the "Input Source" to "Sub" and perform the Video Initial Adjust as mentioned above so that the echo presentation on the sub-display is the same as that on the main display.

4. OPTIONAL EQUIPMENT

4.1 ARP Kit ARP-11

The ARP kit provides automatic radar plotter functions to this radar.

Necessary parts

Name: ARP kit
Type: ARP-11
Code no.: 008-523-050

Contents of ARP kit

Name	Type	Code No.	Qty
ARP Board	18P9014B	001-068-900	1
Pan head screw	M3x6 C2700W	000-163-189-10	4
Spacer*	SQ-9	000-159-320-10	1
	SQ-15	000-159-299-10	3
Spring washer*	M3 C5191W	000-168-187-10	3

*Not used

1. Unscrew all connector nuts at the rear of the display unit.
2. Unfasten all screws to remove the display cover.

Removing the display unit cover

3. Disconnect the printed circuit board 03P9415 and 03P9413.
Before disconnecting the 03P9413, disconnect J601 and J604 at the back of the board.

4. OPTIONAL EQUIPMENT

4. Mount the ARP board, mating with connectors and fixing it with four screws at the location as shown in the figure below.

5. Remount 03P9415 and 03P9413 at original position and display cover.

Note: After connecting the harness to J601 on 03P9413, bend the harness so that it does not touch the parts on ARP board.

4.2 External Monitor

You can display the radar image on an external monitor which accepts industrial standard VGA input using the optional RGB kit OP03-195. Supply monitor and interconnection cable (with HD-15P connectors of male, three rows of 15 pins) locally.

Necessary parts for external monitor

Name: RGB kit
 Type: OP03-195
 Code No.: 008-553-110

Name	Type	Code No.	Qty
RGB board	03P9492	008-553-680	1
Flat cable	SML2SC34-4X50BDP.5S4	000-155-457	1
Cable assy	15SDS/XHP10-005	000-144-511	1
EMI core	RFC-6	000-144-132-10	1

1. Unscrew all connector nuts at the rear of the display unit.
2. Unfasten all screws to remove the display cover.
3. Disconnect the printed circuit board 03P9415 and 03P9413.
 Before disconnecting the 03P9413, disconnect J601 and J604 at the back of the board.
4. Mount the RGB board with two screws and connect the flat cable at the location shown in the figure below.

5. Remount 03P9415 and 03P9413 at their original locations and display cover.

4. OPTIONAL EQUIPMENT

6. Detach LCD panel from the above assembly. Be sure to disconnect the connector and flat cables.
7. Connect the cable assy. 15SDS/XHP10-005 to the rear side of the RGB board.
8. Fix the shield wire of the cable assy. with a screw used to fix the RGB board.
9. Attach the EMI core RFC-1 to the cable assy. closely to the connector.
10. Pass the signal cable through the hole shown below and then pass it through the "OPTION" port at the rear of the display unit..

11. Reassemble the display unit and cover the hole with soft putty to seal.
12. Fix the EMI core RFC-6 to the cable closely to the display unit.

4.3 Remote Display

The FURUNO Display Unit FMD-811, MODEL1832 or GD-280/380, etc. can be connected to this radar as a sub display. The display unit RDP-150 also can be used as a sub display. To interconnect them, use optional cable MJ-B24LPF0008-100/200/300 (see page iv). Also, the EMI core (option) should be attached to the remote display cable to prevent noise.

Installation materials for remote display (Type: CP03-31001、 Code number: 008-556-830)

	Name	Type	Code no.	Qty
1	EMI core	RFC-H13	000-146-570-10	1
2	Cable clamp	CK-13H	000-102-947-10	1
3	Cable-tie	CV-100N	000-162-167-10	2
4	Cable-tie	CV-150N	000-162-186-10	1

1. Unscrew all connector nuts at the rear of the main display unit.
2. Unfasten all screws to remove the display cover.
3. Pass the signal cable from the "OPTION" port at the rear of the display unit through the hole shown in the figure below and then connect it to the SPU board.
4. Fix the shield wire with a screw used to fixed the SPU board.
5. Attach the EMI core RFC-H13 on the signal cable.
6. Attach cable clamp and fix the cable as shown below.

4. OPTIONAL EQUIPMENT

7. Fix the signal cable to the spacer of the FIL board with a cable tie CV-150N.

Fix the cable to the spacer of FIL board with cable-tie.

8. Reassemble the display unit.

4.4 External Buzzer

The optional external buzzer provides a louder alert when an alarm is violated.

External buzzer

Type: OP03-136

Code no.: 000-086-443

Further, you need the optional cable assy. MJ-A7SPF0007-050C (w/7P connector, 5 m, code no. 000-154-028-10).

1. Attach the MJ-A7SPF0007-050C cable assy. (option) to the PC/EXT-BUZZER port at the rear of the display unit.
2. Cut off the XH connector and cable itself (as necessary) at the end of the external buzzer cable.
3. Solder the cables made at step 2 to the MJ-A7SPF0007-050C cable as shown below.

*Connection of external buzzer and display unit
using cable assy. type MJ-A7SPF0007-050C cable*

4. Attach the buzzer to the mounting location with double-sided tape or two self-tapping screws (3x15 or 3x20, local supply).

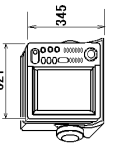

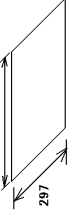

4. OPTIONAL EQUIPMENT

This page is intentionally left blank.
