This is to clarify that the above equipment is incapable of operating (tuning) or readily being altered by the user to operate, within the frequency bands to the Cellular Radiotelephone Service.

The frequencies in question are deleted from the ROM during manufacture, and cannot be restored through any readily available process or component such as: installation of cuts, jumper wires, resistors, diodes, or plug-in IC's; deletion of such items; or reprogramming via access codes or external devices such as a personal computer.

The receiver is incapable of converting digital cellular transmissions to analog voice audio.

Assessing the vulnerability of the receiver to possible modification

The receiver has the possibility of reducing the threshold value to discern transmissions from the Cellular Radiotelephone Service by making modification such as adding jumper wire to the RF band pass filters.

Design features that prevent modification of the receiver to receive Cellular Service

The scanning receiver is designed to prevent any attempt for the user to modify the receiver to receive transmissions from the Cellular Radiotelephone Service by using epoxy to cover the required parts of the RF circuitry including control circuits and band pass filters.

Testing method used to determine compliance with the 38 dB rejection ratio

Testing method

The 12 dB SINAD measurement method in the Cellular Radiotelephone Service used for frequencies that the receiver tunes and the signal rejection ratio gained by the measurement.

Equipment Setup Block Diagram

Measurement method

Tune the receiver to the received frequency and outputs the receiving frequency from SG to obtain its 12 dB SINAD. Then output the interference frequency to obtain its 12 dB SINAD. The signal rejection ratio is the ratio between these two SSG output levels.

The scanning receiver prevents transmissions more than 38 dB from the Cellular Radiotelephone Service from being received for the following reasons:

1. The image frequencies in the frequency range from 25 MHz to 512 MHz are shown as follows:

FR = 25 to 54 MHz, 108 to 174 MHz, 216.0025 to 225 MHz, 225.025 to 405.975 MHz, 406 to 512 MHz

$$\text{IMAGE FREQ.} = \text{FR} + 1^{\text{st}} \text{ IF} \times 2$$

$$1^{\text{st}} \text{ IF} = 1^{\text{st}} \text{ Local} - \text{FR}$$

$$1^{\text{st}} \text{ Local} = A \times 0.075$$

$$A = (\text{FR} + 380.8)/0.075 \text{ or } A = (\text{FR} + 380.7)/0.075$$

$$= A.\text{xxx} \text{ (Cut away decimal)}$$

Refer to the attached table; LOCAL OSC FREQUENCY CALCULATION

$$(25 \text{ to } 54) + (1^{\text{st}} \text{ IF} \times 2) = 786.5 \text{ to } 815.55 \text{ MHz} \text{ IMAGE FREQ.}$$

$$(132.5000 \text{ to } 174) + (1^{\text{st}} \text{ IF} \times 2) = 894.100 \text{ to } 935.55 \text{ MHz} \text{ IMAGE FREQ.}$$

$$(216.0025 \text{ to } 225) + (1^{\text{st}} \text{ IF} \times 2) = 977.5475 \text{ to } 986.55 \text{ MHz} \text{ IMAGE FREQ.}$$

$$(225.025 \text{ to } 405.915) + (1^{\text{st}} \text{ IF} \times 2) = 986.525 \text{ to } 1167.375 \text{ MHz} \text{ IMAGE FREQ.}$$

$$(406 \text{ to } 512) + (1^{\text{st}} \text{ IF} \times 2) = 1167.5 \text{ to } 1273.6 \text{ MHz} \text{ IMAGE FREQ.}$$

These image frequencies are not included within the Cellular Radiotelephone Service Frequency Band except as follows.

$$(108 \text{ to } 132.49166) + (1^{\text{st}} \text{ IF} \times 2) = 869.550 \text{ to } 893.95834 \text{ MHz} \text{ IMAGE FREQ.}$$

These image frequencies are not included within the Cellular Radiotelephone Service Frequency Band.

Label Requirement

The scanning receiver has a label affixed to the product shown on the attached drawing of the model label, which reads as follows:

WARNING: MODIFICATION OF THIS DEVICE TO RECEIVE CELLULAR RADIOTELEPHONE SERVICE SIGNALS IS PROHIBITED UNDER FCC RULES AND FEDERAL LAW.

Based on the above, we hereby attest that the equipment in question compiles fully with the provisions of §15.121 of FCC Rules.

A handwritten signature in cursive script, appearing to read "M. Ishizuka", is written over a horizontal line.

M. Ishizuka, Chief Engineer
