RE: FCC Rule Parts 95.193(d)  
FCC ID: AFJ 262700

Dear Sir/ Madam

This device is equipped with an ATS function, and it transmits ATS tone for less than 15 seconds every 60 seconds.

However if the device receives incoming signals such as emergency communication traffic, the squelch line in the receiver circuitry sends out busy signals to CPU, which interrupts the ATS function momentary until incoming signals disappear.

This way the device gives priority to emergency communication described in FCC Rules, Parts 95.193(d).

Best regards,

A handwritten signature in black ink, appearing to be 'Kenji Asano', written over a horizontal line.

Kenji Asano
