

Engineering and Testing for EMC and Safety Compliance

April 19, 2002
RE: ICOM
FCC ID: AFJAP-12

To Bill Graff:

Kindly see below the answers to your questions,

- 1) The manual declares this device must be "fixed mounted on outdoor permanent structures with a separation distance of 20cm". This is at odds with the installation instructions in Section 4 on page 7 of the manual.

Statement corrected on page 4, a new manual will be uploaded upon receipt of DTS letter from manufacturer.

- 2.) The "Information to User" section described in 15.21 seems to be missing. If I am mistaken, please indicate where in the Manual it exists.

The information to the User is on page 4 referenced under 'Caution' see page 4 attached.

- 3.) Parts Lists are not required for this type of Part 15 device, but a Parts List was uploaded to AmericanTCB. If this is to be included in the Confidentiality Request, please revise your letter.

Kindly remove the part list from the application and forward to RTL. It was inadvertently uploaded to ATCB.

- 4.) Form 731 quotes EIRP as .0295W. This should be a conducted value.

Corrected

- 5.) Form 731 and Test Report call this a DSS, but no processing gain is supplied. If this is to be a DTS, please supply a DTS request letter.

A sample statement has been forwarded to the manufacturer for his signature.

Thank you,

Franck Schuppius
