

**ICOM Explanation for Class II Permissive Change of VHF Air Band Transceiver**  
**Model: IC-A110**

Mr. Solanki

The reason of change is due to the parts out of production.  
However new parts are physically different shapes and specifications,  
Above reason we changed surrounded compartments to much existing electrical  
specification.

At result any of change does not effect the frequency determination or power  
characteristics of device.  
Another words, the radio spec maintains same.
