

RADIO TEST REPORT

Test Report No.: 12403128S-F-R4

Applicant : Pioneer Corporation
Type of Equipment : Pedaling Monitor Sensor
Model No. : SGY-PM930HR
FCC ID : AJDK109
Test regulation : FCC Part 15 Subpart C: 2018
(* ANT+ part)
Test Result : Complied

1. This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
2. The results in this report apply only to the sample tested.
3. This sample tested is in compliance with the limits of the above regulation.
4. The test results in this test report are traceable to the national or international standards.
5. This test report must not be used by the customer to claim product certification, approval, or endorsement by any agency of the Federal Government.
6. This test report covers EMC technical requirements. It does not cover administrative issues such as Manual or non-EMC test related Requirements. (if applicable)
7. The all test items in this test report are conducted by UL Japan, Inc. Shonan EMC Lab.
8. The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan has been accredited.
9. This report is a revised version of 12403128S-F-R3. 12403128S-F-R3 is replaced with this report.

Date of test: August 8 to 17, 2018

Representative test engineer:

Kazuya Noda

Engineer

Consumer Technology Division

Approved by:

Hikaru Shirasawa

Engineer

Consumer Technology Division

- The testing in which "Non-accreditation" is displayed is outside the accreditation scopes in UL Japan.
 There is no testing item of "Non-accreditation".

Contact Person : Masahiro Sato

SECTION 2: Equipment under test (E.U.T.)

2.1 Identification of E.U.T.

Type of Equipment : Pedaling Monitor Sensor
Model No. : SGY-PM930HR
Serial No. : Refer to Section 4, Clause 4.2
Rating : DC 3.0 V
Receipt Date of Sample : August 8, 2018
Country of Mass-production : Japan
Condition of EUT : Production prototype
(Not for Sale: This sample is equivalent to mass-produced items.)
Modification of EUT : No Modification by the test lab

2.2 Product description

Model: SGY-PM930HR (referred to as the EUT in this report) is a Pedaling Monitor Sensor.

General Specification

Clock frequency(ies) in the system : 32.768 kHz, 32 MHz

Radio Specification

ANT+

Equipment type : Transceiver
Frequency of operation : 2447 MHz, 2457 MHz
Type of modulation : GFSK
Antenna type : PCB Antenna (SGY-PM930HR)
Antenna connector type : None
Operation temperature range : -10 deg.C to +50 deg.C.

SECTION 4: Operation of E.U.T. during testing

4.1 Operating mode

The EUT exercise program used during testing was designed to exercise the various system components in a manner similar to typical use.

Test sequence is used: Transmitting 2447 MHz, 2457 MHz
Software: 0.001

Justification: The system was configured in typical fashion (as customer would normally use it) for testing.

4.2 Configuration of tested system

* Cabling and setup were taken into consideration and test data was taken under worse case conditions.

Description of EUT and support equipment

No.	Item	Model number	Serial number	Manufacturer	Remarks
A	Pedaling Monitor Sensor (Transmitter)	SGY-PM930HR	RHTP60003WL *1) RHTP60002WL *2)	Pioneer	EUT
A'	Pedaling Monitor Sensor (Junction box)	SGY-PM930HR	RHTP60003WL *1) RHTP60002WL *2)	Pioneer	EUT
B	Battery	CR2032	-	-	-

*1) Used for Bandwidth test

*2) Used for Radiated emission test

SECTION 5: Radiated emission

5.1 Operating environment

Test place : See test data (APPENDIX 1)
Temperature : See test data (APPENDIX 1)
Humidity : See test data (APPENDIX 1)

5.2 Test configuration

For below 1 GHz, EUT was placed on a platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane. The table is made of Styrofoam and covered with polyvinyl chloride. That has very low permittivity. For above 1 GHz, EUT was placed on a polystyrene platform of nominal size, 0.5 m by 0.5 m, raised 1.5 m above the conducting ground plane.

Photographs of the set up are shown in APPENDIX 3.

5.3 Test procedure

The Radiated Electric Field Strength intensity has been measured on a semi-anechoic chamber with a ground plane at a distance of 3 m.

Although these tests were performed other than open area test site, adequate comparison measurements were confirmed against 30 m open are test site. Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field based on KDB 414788. These tests were performed in semi anechoic chamber. Therefore the measured level of emissions may be higher than if measurements were made without a ground plane. However test results were confirmed to pass against standard limit.

The Radiated Electric Field Strength intensity has been measured with a ground plane and at a distance of 3 m.

Frequency: From 9 kHz to 30 MHz at distance 3 m (Refer to Figure 2)

The EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for vertical polarization (antenna angle: 0 deg., 45 deg., 90 deg. and 135 deg.) and horizontal polarization. Drawing of the antenna direction is shown in Figure 1.

Frequency: From 30 MHz to 26.5 GHz at distance 3 m (Refer to Figure 2).

The measuring antenna height was varied between 1 m and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for both vertical and horizontal antenna polarization.

SECTION 6: 20 dB bandwidth & 99 % Occupied bandwidth

Test procedure

The tests were made with below setting connected to the antenna port.

Test	Span	RBW	VBW	Sweep time	Detector	Trace	Instrument used
20dB Bandwidth	2 to 5 times of OBW.	1 to 5 % of OBW	Three times of RBW	Auto	Peak	Max Hold	Spectrum Analyzer
99% Occupied Bandwidth *1)	Enough width to display emission skirts	1 to 5 % of OBW	Three times of RBW	Auto	Sample	Max Hold	Spectrum Analyzer

*1) Peak hold was applied as Worst-case measurement.

Summary of the test results:Pass

Refer to APPENDIX 1

Averaging factor (Duty factor) Calculation chart

* Worst Transmit Duty cycle is Communication mode with Cyclocomputer which max on time is 0.144 ms and Minimum interval is 83 ms (Refer to ANT+ Worst Transmit Duty sheet).
The ON time (0.144 ms) appears 2.0 times ($100 / 83$) in 100 ms.
The actual measurement value was applied as Averaging factor (Duty factor).
(This specification is from customer)

Radiated Emission (Plot data, Worst case)

Report No.	12403128S-B	
Test place	Shonan EMC Lab.	
Semi Anechoic Chamber	No.3	No.3
Date	August 18, 2018	August 17, 2018
Temperature / Humidity	22 deg. C / 51 % RH	24 deg. C / 58 % RH
Engineer	Kazuya Noda (9 kHz - 30 MHz)	Kazutaka Takeyama (30 MHz - 1 GHz)
Mode	Tx ANT+ 2457 MHz	Shiro Kobayashi (1 GHz – 26.5 GHz)

*These plots data contains sufficient number to show the trend of characteristic features for EUT.

*The plots data in the frequency range below 10 MHz is omitted, since the noise was not detected in this range.
