Dear Sirs:

Rockwell Collins, Inc. is a provider of avionics for the commercial aviation industry. The DME-2100 is a distance measuring navigation aid that is used on commercial Air Transport aircraft. The following link shows the information on the legacy DME product line. The DME-2100 is a replacement for this line of distance measuring equipment.

<http://www.rockwellcollins.com/ecat/at/DME-900.html?smenu=4>

This attests that the DME-2100 is a non-consumer product and is for use only in commercial Air Transport aircraft. Confidentiality of the Internal Photos.pdf exhibit is being requested because this is a non-consumer device which is not accessible by the general public and is only serviceable by the applicant or designated technicians. Availability of the photos to the public, showing internal construction, could severely damage the company's business advantage.

Rockwell Collins, Inc. as a supplier of avionics provides a maintenance manual to service centers. The maintenances manual contains information on operation, installation and repair for the DME. The Manual.pdf exhibit is provided as the operator manual. An operation manual is not provided with the DME-2100 product, as it is part of an aircraft system. Confidentiality of the Manual.pdf exhibit is being requested due to the exhibit also containing technical details of the construction of the DME-2100 which, if available to the public, could severely damage the company's business advantage.

I appreciate your assistance in this matter.

Sincerely,

Gustavo A. Colmenares, Sr. Engineering Manager
Rockwell Collins
