Re: Confidentiality of FCC ID: AJKPN822-2365 Exhibits

Dear Sirs:

Rockwell Collins, Inc. is a provider of avionics for the commercial aviation industry. The LRA-2100 is a radio altimeter that is used on commercial Air Transport aircraft. The following link shows the information on legacy LRA product line. The LRA-2100 is a replacement for this line of radio altimeters.

[Rockwell Collins LRA-900 Product Web Page](#)

This attests the LRA-2100 is a non-consumer product and is for use only in commercial Air Transport aircraft. Confidentiality of the Internal Photos.pdf exhibit is being requested because this is a non-consumer device which is not accessible by the general public and is only serviceable by the applicant or designated technicians. Availability of the photos to the public, showing internal construction, could severely damage the company's business advantage.

Rockwell Collins, Inc. as a supplier of avionics, provides a maintenance manual to service centers. The maintenance manual contains information on operation, installation and repair for the altimeter. The Manual.pdf exhibit is provided as the operator manual. An operation manual is not provided with the LRA-2100 product, as it is part of an aircraft system. Confidentiality of the Manual.pdf exhibit is being requested due to the exhibit also containing technical details of the construction of the LRA-2100 which, if available to the public, could severely damage the company's business advantage.

I appreciate your assistance in this matter.

Sincerely,

Gustavo Colmenares, Sr. Engineering Manager  
Rockwell Collins
