DFS client device channel plan and software operational declaration

Date: 2021-12-10

We, **Sony Corporation**, declare that the device, FCC ID: **AK8J20H103**, Model Name: **J20H103**, does not have Ad Hoc on "non-US frequencies" and/or on "DFS frequencies". Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons and support for ad-hoc peer-to-peer modes.

Below is the channel / frequency plan for the device

СН	1	2	3	4	5	6	7	8	9	10	11
Frequency (MHz)	2412	2417	2422	2427	2432	2437	2442	2447	2452	2457	2462
Scan Type	Active										

CH	36	38	40	42	44	46	48		
Frequency (MHz)	5180	5190	5200	5210	5220	5230	5240		
Scan Type	Passive								

CH	52	54	56	<mark>58</mark>	60	62	64	
Frequency (MHz)	5260	5270	5280	5290	5300	5310	5320	
Scan Type	Passive	Passive	Passive	Passive	Passive	Passive	Passive

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times, except when in ad-hoc mode on US non-DFS channels. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is protected by a special signature and CRC checksum. Signature and CRC checksum will be calculated and verified before firmware upgrade. Unauthorized modification to firmware will lead to the failure of verification and thus firmware upgrade will not be allowed.

Sincerely yours,

Sincerely yours,

D. Hory
