

Compliance with 47 CFR 15.247(i)

“Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this chapter.”

The EUT is a wireless headset that communicates with a USB dongle. It can be considered a portable transmitter per 47 CFR 2.1093(b). The antennas are internal to the unit and permanently attached with +0.5 dBi gain. The maximum peak conducted output power is 1.038 mW.

The maximum peak power is 1.16 mW (EIRP) for FCC ID: AL8-995H. The transmit frequency is 2405 to 2477 MHz, therefore the EUT does not require routine SAR evaluation per “TCB Exclusions List”, footnote 3 (dated July 17, 2002). See below:

The exposure category is “General Population”. The distance is < 2.5 cm. Therefore the “Low Threshold” is 24.5 mW (EIRP) – above which routine SAR evaluation would be required. Since the maximum peak power of the EUT is 1.16 mW (peak EIRP), routine SAR evaluation is not required.

The applicant’s wireless headset, FCC ID: AL8-995H, is compliant with the requirements of 15.247(i).
