### Overview

This application is for a new grant of a USB dongle radio FCC ID:AL8-995USB. The device operates in the 2.4 GHz band as a part 15.247 DTS device. The device gets power through the USB port of a computer but has no other wired connections to ground or data ports. The customer is informed that the port may only be used for power in any future modifications. The radio utilizes PCB etch antennas which are not user accessible.

Confidentiality requested for allowed files. Request is properly addressed and referenced.

Short term confidentiality requested.

### Recommendation

All items have been resolved and completed to my satisfaction; therefore I recommend this application for approval.
