Subject: Declaration of similarity between W8210T and W8220T

Dear Sir / Madam,

This is regarding our Application for FCC / IC registration for our DECT UPCS Mono / Stereo headset. We declare that the similarities between these products are:

Model W8210T is a Mono DECT UPCS headset that shares the same radio, PCBA and mechanical housing of the PCBA as our Model W8220T which is a Stereo DECT UPCS headset. The only main differences between these models are the mechanical architecture to allow for another speaker and achieve the Stereo feature and a battery with greater capacity (700mA/hr vs 490mA.hr) to compensate for the Stereo capability, as for the rest of the electrical characteristics they remain identical.

If you require additional information, do not hesitate on contacting me.

Yours Sincerely,

Ismael Talancon
Global Compliance Assistant Manager
