Hello Ismael,

The wireless headset does not need to tested against CS-03 part V. However, the base connects to the handset port of a telephone unit shall be tested against CS-03 part 1 as per CS-03 part 1 section 1.1.4:
> ``component devices intended for connection between the network interface and TE (e.g. stuttered dial tone detectors), for connection between telephone terminal handsets and terminal base units (e.g. receiver amplifiers), for replacement of handsets or connection to handsets themselves.``

Subject: IC Web Enquiry - Clarification on requirements for headsets in regards to CS-03 part V

Topic: Science and technology
What best describes your situation?:Science.gc.ca

Page ID: n/a

Comments:
Dear Department of Science and Technology; we have a two-part wireless product (base and a wireless headset).Our base unit connects to the handset port of a telephone unit when a call comes in the base redirects the call to our wireless headset. We need clarification in regards to the applicability of CS-03 part V to our wireless headset since it is our understanding that this is applicable to "handsets" and not "headsets". Your help to clarify this requirement will be much appreciated.

Regards,
