Karen, I have accessed the new ftp site, and reviewed the Kenwood P1010008 project for FCC ID: ALH415101. I have reviewed the FCC PBA request response and there is one item that did not seem to get addressed in this application submittal:

The FCC has requested in item 4 of their KDB Response 803186, that SAR testing should be performed at powers of 120% of rated power unless the device is not capable of operating at those powers. The SAR report documents power of 37.2dBm, or 5.25W, for this device rated at 5W. The RF test report page 13 of 43 indicates that the maximum allowed power (rating) of 2.1033(c)(7) is 6W. Please address this concern of the FCC's in this application.

Please let me know if you have any questions or concerns. Please provide a response to the above issue so this review can be continued.

Best regards,

Chris Harvey

Subject: FTP site info

Chris,

The FTP site is now back up.  
The only difference is that you'll need to go to [compliancetestingllc.com](http://compliancetestingllc.com).

Let me know if you have any questions.

Thank you and have a great weekend!
