# VHF Maritime Radio Use

#### **Distress Calls**

Radiotelephone distress call and message transmission procedure:

#### The distress call

- 1 The distress signal MAYDAY spoken three times.
- 2 The words THIS IS.
- 3 The call sign or other identification of the station in distress, spoken three times.

### The distress message:

- 4 Particulars of its position.
- **5** The nature of the distress.
- 6 The kind of assistance desired.
- **7** Any other information which might facilitate rescue. For example, the length, color, and type of vessel, and number of persons on board.

## **Operating Frequency Requirements**

According to Federal Communications Commission Rule Part 80:

The radiotelephone stations on ships subject to Part II of Title III of the Communications Act must be capable of operating on the frequency 156.800 MHz and in other respects meet the requirements of §80.143. The radiotelephone stations on ships subject to the Safety Convention must be capable of operating in the simplex mode on the ship station transmitting frequencies specified in the frequency band 156.025 MHz to 157.425 MHz and in the semiduplex mode on the two frequency channels specified in the following table. Additional information about operating requirements in the Maritime Services can be obtained from the full text of FCC Rule Part 80.

Channel Number	Frequency (MHz)	
	Transmit	Receive
01	156.050	160.650
