15.214(d) THIS DEVICE COMPLIES WITH THE SECURITY CODE REQUIREMENTS
OF 15.214(d)(1)(2) AND (3) BY MEANS OF THE FOLLOWING:

To protect against mis-billed calls, this phone has 'RANDOM CODE' digital Security which automatically selects one of over 65,000 digital security Codes for the handset and base. Also, 'AUTOSECURE' electronically locks The phone when the handset is in the base.

The first time the handset is charged, the security code is automatically Set. To change the digital security code it is necessary to deregister The code, then register a different code. The instructions are Included in Page 44 of the user's manual.

TEST PROCEDURE

GENERAL: This report shall NOT be reproduced except in full without the written approval of TIMCO ENGINEERING, INC. Shielded interface cables were used in all cases except for cables connecting to the telephone line and the power cords. A test program was run which simulated a normal data transmission on a network.

POWER LINE CONDUCTED INTERFERENCE: The procedure used was ANSI STANDARD C63.4-1992 using a 50uH LISN. Both lines were observed. The bandwidth of the spectrum analyzer was 10 kHz with an appropriate sweep speed. The ambient temperature of the UUT was 78°F with a humidity of 41%.

BANDWIDTH 6.0dB: The measurements were made with the spectrum analyzer's resolution bandwidth(RBW)=100 kHz and the video bandwidth(VBW)=300 kHz and the span set as shown on plot.

POWER OUTPUT: The RF power output was measured at the antenna feed point by removing the permanent antenna and connecting the UUT to a peak power meter, HP Model No. 8900C.

ANTENNA CONDUCTED EMISSIONS: The RBW=100 kHz, VBW > or = RBW and the spectrum was scanned from 30 MHz to the 10th Harmonic of the fundamental.

RADIATION INTERFERENCE: The test procedure used was ANSI STANDARD C63.4-1992 using a HEWLETT PACKARD spectrum analyzer with a preselector. The bandwidth(RBW) of the spectrum analyzer was 100 kHz up to 1GHz and 1.0MHz above 1 GHz with an appropriate sweep speed. The VBW above 1.0 GHz was = 1.0 MHz. The analyzer was calibrated in dB above a microvolt at the output of the antenna. The ambient temperature of the UUT was 90°F with a humidity of 41%.

15.247(d) POWER SPECTRAL DENSITY. The peak within the pass band was located with a RBW set to 30 kHz and a span of 5 MHz, slightly greater than the 6 dB bandwidth, then the emission was centered on the display and the span and RBW reduced. A 1.5MHz span, 3 kHz RBW, and a sweep time to sweep time set to 500 seconds. Since spectral line spacing could not be resolved, the noise power density method was used. The response was then plotted, a correction factor of measured using the noise power density and adding the correction of 35 dB and any attenuation used was added.

15.247(e): PROCESSING GAIN, This gain is supplied by the manufacturer of the UUT.

2.1033(b)(4) ANTENNA AND GROUND SYSTEM:

This unit uses a $\frac{1}{4}$ wave internal and $\frac{1}{2}$ wave external antenna for the base unit. It uses a $\frac{1}{2}$ wave external antenna for the handset. The unit has provisions for diversity reception using 1 of these antennas. The antennas are permanently attached to the unit and no provisions are made for connection to an external antenna.

No ground connection is provided. The only ground in use is the ground plane on the printed circuit board.

APPLICANT: UNIDEN AMERICA CORPORATION
FCC ID: AMWUC787
NAME OF TEST: POWER LINE CONDUCTED INTERFERENCE
RULES PART NUMBER: 15.207

MINIMUM REQUIREMENTS:	FREQUENCY MHz	LEVEL dBuV
	0.450-30	48 dBuV or 250 uV

TEST PROCEDURE: ANSI STANDARD C63.4-1992

ON HOOK

THE HIGHEST EMISSION READ FOR LINE 1 WAS 58.140 uV @ 630 kHz.
THE HIGHEST EMISSION READ FOR LINE 2 WAS 58.140 uV @ 690 kHz.

OFF HOOK

THE HIGHEST EMISSION READ FOR LINE 1 WAS 43.598 uV @ 660 kHz.
THE HIGHEST EMISSION READ FOR LINE 2 WAS 41.636 uV @ 690 kHz.

THE GRAPHS IN EXHIBITS 8-9 REPRESENT THE EMISSIONS READ FOR
POWERLINE CONDUCTED FOR THIS DEVICE.

TEST RESULTS: Both lines were observed with the UUT transmitting.
The measurements indicate that the unit DOES appear to meet the FCC
requirements for this class of equipment.

APPLICANT: UNIDEN AMERICA CORPORATION
FCC ID: AMWUC787
NAME OF TEST: OCCUPIED BANDWIDTH
RULES PART NUMBER: 15.247

15.247(a)(2)

6dB bandwidth shall be at least 500 kHz. As shown in the accompanying plots. The bandwidth was measured at three places in the band and the narrowest is reported below.

Base 6dB Bandwidth = 1.530 MHz

Handset 6 dB Bandwidth = 1.510 MHz

15.247(B) PEAK POWER OUTPUT

The maximum peak output power shall not exceed 1 watt (30 dBm). If directional transmitting antennas with a gain of more than 6 dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Both the base and handset have a maximum power output of less than +30 dBm. The antennas are non-directional and do not exceed 6 dBi gain. The power output was measured at three places in the band and the highest is reported below.

POWER OUTPUT - LIMIT +30 dBm

BASE PEAK POWER OUTPUT = 31.6 mWatts EIRP
HANDSET PEAK POWER OUTPUT = 14.5 mWatts EIRP

6dB Bandwidth Plot - Base

6dB Bandwidth Plot - Handset

APPLICANT: UNIDEN AMERICA CORPORATION

FCC ID: AMWUC787

NOTE: This device communicates by using time division duplexing. It uses the same frequency in both transmission and reception. It has a 2.25mS time frame for one transmission and reception cycle. This frame signal is generated by the spread spectrum chip and is provided to all other circuits. This duplexing method when incorporated with the direct sequence spread spectrum system gives an inherent 6.02 dB or 50% duty cycle which is accounted for in the spurious radiated emissions.

NAME OF TEST: RADIATED SPURIOUS EMISSIONS - HANDSET

RULES PART NUMBER: 15.247(c)

REQUIREMENTS: Emissions that fall in the restricted bands (15.205). These emissions must be less than or equal to 500 uV/m (54 dBuV/m). Spurious not in a restricted band must be 20 dBc.

TEST DATA: HANDSET

SAMPLE CALCULATION: $FS_{dBuV/m} = MR_{dBuV} + ACF_{dB} + COAX + C.F.$

METHOD OF MEASUREMENT: The procedure used was ANSI STANDARD C63.4-1992. When an emission was found, the table was rotated to produce the maximum signal strength. The antenna was placed in both the horizontal and vertical planes and the worse case emissions were reported. The spectrum was scanned from 30 MHz to the 10th Harmonic of the fundamental using an Agilent Spectrum Analyzer, Hewlett Packard Model 85685A Preselector, Hewlett Packard Model 85650A Quasi-Peak Adaptor, and an appropriate antenna. Low loss coax was used above 1 GHz. Measurements were made at Timco Engineering, Inc. 849 NW State Road 45 Newberry, FL.

TEST RESULTS: The unit DOES meet the FCC requirements.

NAME OF TEST: RADIATED SPURIOUS EMISSION INTO ADJACENT RESTRICTED BAND

REQUIREMENTS: Emissions that fall in the restricted bands (15.205). These emissions must be less than or equal to 500uV/m (54 dBuV/m)

TEST PROCEDURE: An in band field strength measurement of the fundamental Emission using the RBW and detector function required by C63.4-2000 and FCC Rules. The calculated field strength in the adjacent restricted band is presented below.

BANDEDGE CALCULATION BASE

FREQUENCY: 2777 MHz	FREQUENCY: 2407 MHz
7.00 dBuV Peak	8.40 dBuV Peak
29.00 dB ACF	28.89 dB ACF
10.00 dB ATTN	10.00 dB ATTN
3.39 dB Coax Loss	3.32 dB Coax Loss
49.39 dBuV	50.61 dBuV

RESULTS: The limit is 54 dBuV.
This device appears to be passing.

BANDEDGE CALCULATION HANDSET

FREQUENCY: 2777 MHz	FREQUENCY: 2407 MHz
7.20 dBuV Peak	8.42 dBuV Peak
29.00 dB ACF	28.89 dB ACF
10.00 dB ATTN	10.00 dB ATTN
3.39 dB Coax Loss	3.32 dB Coax Loss
49.59 dBuV	50.63 dBuV

RESULTS: The limit is 54 dBuV.
This device appears to be passing.

NAME OF TEST: POWER SPECTRAL DENSITY

RULES PART NUMBER: 15.247(d)

REQUIREMENTS: The power spectral density averaged over any 1 second interval shall not be greater than 8 dBm in any 3 kHz bandwidth within these bands.

TEST DATA:

The spectrum line spacing could not be resolved so the noise power density was measured;

Measurement Method:

Starting from the settings that were used for the 6 dB bandwidth the peak signal was located and the span was reduced and the sweep time increased in a manner to maintain calibration and to keep the peak emission in the display, then the sweep time was increased to 500seconds at 1.5MHz span and a RBW changed to 3 kHz. The spectrum analyzer was put into the noise power mode and the plots made.

<u>BASE</u>	<u>HANDSET</u>
10.1 dBuV	6.5 dBuV
20 dB ATTN	50 dB ATTN
35 dB CF	35 dB CF
65.1 dBuV	91.5 dBuV
65.1 dBuV-107= -23.2 dBm	91.5 dBuV-107= -15.5 dBm
