Dear Timco Engineering,

I hope this reply will solve the FCC pending and we can obtain the FCC Grant very soon.

Our Letter of Explanation is already explaining the maximum slot usage regardless the featured mode such **range extender (data rate and time slot reduction), intercom call, call conferencing, call forwarding, 2nd incoming call, call waiting, etc** as FCC is concerning about.

I also checked the actual files uploaded to your site as this FCC ID: AMWUN405R application, and I should have been added the file "D3580 Part 15D Declarations.doc" to this application. Please let me know if I need to upload this file to your site separately under JOB #: 290NC12. Please see this Declarations defines AMWUN405R's "Max number of slots in use simultaneously" to "1". **the various duty cycles** will not be happening in FCC ID: AMWUN405R communication.

Transmission Mode:

This DECT 6.0 Cordless Handset utilizes a DECT wireless communication technology with a maximum of 1 TDMA slot out of the 24 total slots.
