Federal Communications Commission
Authorization and Evaluation Division

SUBJECT: Scanning Receiver Attestation for FCC ID: AMWUT416

To Whom It May Concern:

All frequency selection of the scanner receiver is controlled by the scanner's firmware, which cannot be readily altered by the user. This firmware does not allow the selection (tuning) of the frequency bands allocated to the Cellular Radiotelephone Service. The scanning receiver is incapable of converting digital cellular communication transmissions to analog voice audio. The scanning receiver will reject any signals from the Cellular Radiotelephone Service frequency bands that are 38 dB or lower based upon a 12 dB SINAD measurement.

Regards,
