

# RF Exposure evaluation

## 1. RF Exposure evaluation for the applying LMA transmitter

As shown below, the main antenna is built in the left top side of LCD and the auxiliary antenna is built in the top right side of LCD. The separation distances between those antennas and the human body are 20cm or more.

Therefore the applying LMA transmitter and the antenna system is categorized as a mobile device by FCC CFR 47 Section 2.1091.

### [MPE evaluation]

The following table shows the highest conducted peak output power of the applying modular device measured with the host device, and the maximum peak antenna gains of the host device.

Transmission mode	<b>P</b> : conducted peak output power	<b>G</b> : peak antenna gain
5.2GHz band OFDM	17.36 dBm (54.5 mW)	+ 2.15 dBi

With those results, the maximum power density at 20cm distance is calculated as follows.

Transmission mode	EIRP = P + G (dBm)	EIRP (mW)	Max. power density $S = \text{EIRP} / (4 \times 20^2 \times \pi)$
5.2GHz bnad OFDM	19.51	89.3	0.0178 mW/ cm <sup>2</sup>

Since the applying modular transmitter device does not function to emit the radio frequency from both diversity antennas simultaneously, the above result is the maximum value of RF exposure to the persons, and is far below the MPE limit (1.0 mW/ cm<sup>2</sup>). Therefore the LMA transmitter meets the MPE requirements for general Population/Uncontrolled exposure.

## 2. RF Exposure evaluation for co-located Bluetooth transmitters

The applying host device supports co-located Bluetooth device as follows.

	FCC ID	Grantee Name	Granted Date	Output
Built-in type LMA transmitter	ANO20020100MTN	IBM Japan, Ltd.	Under inspection with this application	2.5mW

### Co-located Bluetooth options for ThinkPad X40 Series

The main and auxiliary antennas placed at LCD section of the host device (ThinkPad X40 Series) are assembled apart from the Bluetooth antenna shown in the previous page with 20 cm or more.

Therefore the RF exposure evaluation for the Bluetooth transmitter is allowed to be examined independently of the applying WLAN antennas. In other word, the SAR testing for the applying transmitter in co-locating with the Bluetooth option is not required thanks to the following reason.

Although when a customer operates the applying PC on his lap the sufficient separation distance (minimum 20cm) between the above Bluetooth antenna and his body (lap) can not be maintained, the footnote of the Section 3 in Supplement C to OET Bulletin 65 states:

“<sup>14</sup> ..... If a device, its antenna or other radiating structures are operating at closer than 2.5 cm from a person's body or in contact with the body, SAR evaluation may be necessary when the output is more than 50 – 100 mW, depending on the device operating configurations and exposure conditions.”

The output power of the Bluetooth transmitter in the previous table does not exceed 5mW.

Therefore the transmitters also satisfies the RF exposure evaluation regarding CFR 47 Part 15.247(b)(4) without a SAR compliance test report, and can operate with the applying transmitter simultaneously.

IBM Web site guides customers about the **grant condition** concerning the co-located transmitter devices. See the next page.

### 3. IBM Web site for user’s guidance concerning the co-located transmitters

Note) The info for the applying LMA transmitter is not available until the product announcement.  
<http://www.pc.ibm.com/qtechinfo/MIGR-43693.html>

The screenshot shows the IBM website interface. At the top, there is a search bar and navigation links for Home, Products & services, Support & downloads, and My account. Below this is a secondary navigation bar with links for PC support home, Login, Profile, My page, Ask an expert, and Help. The main content area is titled "TP Wireless Systems – Approved wireless Mini PCI options and additional RF option devices receive FCC certification". It includes a section for "Applicable countries/regions" (United States) and "Service hints & tips". The core of the page is a table titled "Affected configurations" which lists LMA adapters, their FCC IDs, and the ThinkPad models they are approved for. The table has columns for the adapter name, FCC ID, approved ThinkPad models, and a grid for PC options allowed (multiple transmission #1, #2, #3). Below the table is a "show next page" button and a "NOTES" section with details for specific FCC IDs and their corresponding option names. A "Solution" section provides supplementary information and a "Use of wireless options" section with a list of conditions for use.

LMA (Limited Modular Approval) adapters	FCC IDs	Approved ThinkPad models	PC options allowed multiple transmission		
			#1	#2	#3
IBM High Rate Wireless LAN Mini PCI Adapter	ANOM34WEB56GA	R32 Series T30 Series >G0 Series >G00	NG	O	O
Cisco Aironet Wireless 802.11b	ANOU58H004	R32 Series T30 Series >G0 Series >G00 R40 Series T40 Series >G0 Series >G11	NG	O	O
Intel PRO/Wireless LAN 2100 3B Mini PCI Adapter	ANO20020201CLK	R50 Series R40 Series T40 Series >G0 Series >G11 >40 Series	O	NG	O
IBM 11a/b/g Wireless LAN Mini PCI Adapter	ANO20030400LEG	R50 Series R40 Series T40 Series >G0 Series >G11 >40 Series	O	O	O
IBM High Rate Wireless LAN Mini PCI Adapter III	ANO20020200BRX	G40 Series R40 Series	NG	NG	O

**NOTES:**  
**NG:** Not authorized to use by the FCC rule, or not recognized by BIOS.  
**#1:** FCC ID: ANO20020100MTN      Option Name: [IBM Integrated Bluetooth with 56K Modem](#)  
**#2:** FCC ID: P14BT-ULTRA      Option Name: [Bluetooth UltraPort Module from IBM](#)  
**#3:** FCC ID: P14BT-IBM-PCI      Option Name: [Bluetooth PC Card II](#)

**Solution**  
 The supplementary document of ThinkPad's "Service and Troubleshooting Guide" has the following information in "Wireless regulatory information - USA Federal Communications Commission (FCC)" section:

**Use of wireless options**  
 Please make sure of the following conditions on use of wireless features:

1. Visit the IBM site at [www.ibm.com/pc/qtechinfo/MIGR-43693.html](http://www.ibm.com/pc/qtechinfo/MIGR-43693.html) and confirm the updated list of RF option devices that have been approved to cooperate with the integrated wireless feature.
2. When you use any other RF option device that is not listed on the IBM site, all other wireless features including the integrated transmitter in your ThinkPad computer are required to be turned off.
3. Users are requested to follow the RF Safety instructions on wireless option devices that are included in the RF option device's user's manual.
