The test was performed in accordance with KDB 971168 D01 v02r02, Clause 6.

Remarks

All measurements were performed using an integration method at the band edge. The RBW setting was set at one tenth of the integration bandwidth. The integration bandwidth was configured to be at least 1% of the 26 dB bandwidth as defined in 22.917(b). The integration bandwidth was configured in the position that yielded the highest result in the 1 MHz region immediately outside the band edge. The limit is -13 dBm as MIMO is not supported by the UE.
