**Tested To The Following Standards:** 

FCC Part 15 Subpart C Section(s) 15.207 & 15.247 (DTS 2400-2483.5 MHz)

Report No.: 97407-6A

Date of issue: October 23, 2015

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 98 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

# **ADMINISTRATIVE INFORMATION**

### **Test Report Information**

#### **REPORT PREPARED FOR:**

Enlighted, Inc. 930 Benecia Ave. Sunnyvale, CA 94085 **REPORT PREPARED BY:** 

Terri Rayle CKC Laboratories, Inc. 5046 Sierra Pines Drive Mariposa, CA 95338

REPRESENTATIVE: Deepak Kumar Customer Reference Number: 0002755

DATE OF EQUIPMENT RECEIPT: DATE(S) OF TESTING: Project Number: 97407

August 26, 2015 August 26 – September 1, 2015

### **Revision History**

**Original:** Testing of Enlighted USB Commissioning Key, Model: UK-01 to FCC Part 15 Subpart C Section(s) 15.207 & 15.247 (DTS 2400-2483.5 MHz).

Addendum A: To add a statement clarifying worst orientation in Section 15.247(d) Radiated Emissions.

### **Report Authorization**

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Steve -7 Bel

Steve Behm Director of Quality Assurance & Engineering Services CKC Laboratories, Inc.

## **Test Facility Information**

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S): CKC Laboratories, Inc. 1120 Fulton Place Fremont, CA 94539

|                   |                                    |               |         |
| 15.247(e)         | Power Spectral Density             | NA            | Pass    |
|                   |                                    |               |         |
| 15.247(d)         | RF Conducted Emissions & Band Edge | NA            | Pass    |
|                   |                                    |               |         |
| 15.247(d)         | Radiated Emissions & Band Edge     | NA            | Pass    |

NA = Not applicable.

### **Modifications During Testing**

This list is a summary of the modifications made to the equipment during testing.

Summary of Conditions

No modifications were made during testing.

Modifications listed above must be incorporated into all production units.

## **Conditions During Testing**

This list is a summary of the conditions noted to the equipment during testing.

### **Summary of Conditions**

None

# **EQUIPMENT UNDER TEST (EUT)**

During testing numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

| Configuration 1          |                 |         |                      |

#### Device

### Configuration 1

Test Conditions / Notes:

OBW set up

Application: PuTTy version 0.64 for Zigbee

Temperature: 22.5°C Humidity: 45 % Atmospheric Pressure: 101.6 kPa

High Clock: 16MHz Transmitting operating frequency= 2405MHz, 2440MHz and 2480MHz Gain of the antenna= 0dBi Method: KDB 558074 v03r03 section 8.1

RBW=100kHz VBW=300kHz

The EUT is an Enlighted USB Commissioning Key. The EUT is powered by a laptop and connected to a laptop in order to control the EUT for testing purposes. The EUT is set in continuously transmitting as intended.

## 15.247(d) RF Conducted Emissions & Band Edge

### **Test Conditions**

The Reference level measurement for Emission is non restricted frequency bands were made using the methods set out in KDB "558074 D01 DTS Meas Guidance v03r03", Section 11 Emissions in non-restricted frequency band. NOTE: The Reference Level is the limit line for Conducted Spurious Emission for Non-Restricted Frequency Band

| Reference Limit in 100kHz |                |                      |  |  |  |
|---------------------------|----------------|----------------------|--|--|--|
| Channel                   |                |                      |  |  |  |
| Channel                   | dBuV in 100kHz | Reference Limit dBuV |  |  |  |
| Low                       | 107.07         | 87.07                |  |  |  |
| Middle                    | 106.92         | 86.92                |  |  |  |
| High                      | 106.89         | 86.89                |  |  |  |

Choose the worst reference limit for all the channels.

| , and the second |              |         |     |  |

### Test Conditions / Notes:

Band edge set up

Application: PuTTy version 0.64 for Zigbee

Temperature: 22.5°C Humidity: 45 % Atmospheric Pressure: 101.6 kPa

High Clock: 16MHz Transmitting operating frequency= 2405MHz, 2440MHz and 2480MHz Gain of the antenna= 0dBi Method: KDB 558074 v03r03 section 13.2

The EUT is an Enlighted USB Commissioning Key. The EUT is powered by a laptop and connected to a laptop in order to control the EUT for testing purposes. The EUT is set in continuously transmitting as intended.

### Test Conditions / Notes:

Band edge set up

Application: PuTTy version 0.64 for Zigbee

Temperature: 22.5°C Humidity: 45 % Atmospheric Pressure: 101.6 kPa

High Clock: 16MHz Transmitting operating frequency= 2405MHz, 2440MHz and 2480MHz Gain of the antenna= 0dBi Method: KDB 558074 v03r03 section 13.2

The EUT is an Enlighted USB Commissioning Key. The EUT is powered by a laptop and connected to a laptop in order to control the EUT for testing purposes. The EUT is set in continuously transmitting as intended. The laptop is connected to a keyboard, mouse, headphones and Prosafe 8 port10/100Mbps Switch as setting up for the host EUT Requirements.

## **Emissions Test Details**

### **TESTING PARAMETERS**

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

### **CORRECTION FACTORS**

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in dB $\mu$ V/m, the spectrum analyzer reading in dB $\mu$ V was corrected by using the following formula. This reading was then compared to the applicable specification limit.

| SAMPLE CALCULATIONS |                     |          |  |  |  |
|---------------------|---------------------|----------|--|--|--|
|                     | Meter reading       | (dBµV)   |  |  |  |
| +                   | Antenna Factor      | (dB)     |  |  |  |
| +                   | Cable Loss          | (dB)     |  |  |  |
| -                   | Distance Correction | (dB)     |  |  |  |
| -                   | Preamplifier Gain   | (dB)     |  |  |  |
| =                   | Corrected Reading   | (dBµV/m) |  |  |  |

### TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

| MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE |                     |                  |                   |  |  |  |
|--|---------------------|------------------|-------------------|--|--|--|
| TEST   | BEGINNING FREQUENCY | ENDING FREQUENCY | BANDWIDTH SETTING |  |  |  |
| CONDUCTED EMISSIONS  | 150 kHz             | 30 MHz           | 9 kHz             |  |  |  |
| RADIATED EMISSIONS   | 9 kHz               | 150 kHz          | 200 Hz            |  |  |  |
| RADIATED EMISSIONS   | 150 kHz             | 30 MHz           | 9 kHz             |  |  |  |
| RADIATED EMISSIONS   | 30 MHz              | 1000 MHz         | 120 kHz           |  |  |  |
| RADIATED EMISSIONS   | 1000 MHz            | >1 GHz           | 1 MHz             |  |  |  |

#### SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or carrot ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

#### Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

#### Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

### Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
