3 GENERAL INFORMATION

3.1 GENERAL DESCRIPTION OF EUT

PRODUCT	19" COLOR MONITOR
MODEL NO.	9Glr, 9Klr, 9Alr, 9Glrs
PART NO.	S991V-
POWER SUPPLY	Switching Input rating: 100-240Vac, 2.5A, 50/60Hz Power Cord: Non-shielded AC, 3 pin (1.2m)
DATA CABLE	Shielded (1.8m) with a ferrite core

NOTE: This report is prepared for FCC Class II Permissive Change. The original report was issued on Jan. 31, 2001 and granted on April 05, 2001. The main change is on its video board.

The EUT is a 19" COLOR MONITOR with resolution up to 1600x1200.

The EUT has four model names, which are identical to each other except for their marketing areas. For the final test, model: 9Glr was selected as the representative model for the test and its data is recorded in this report.

For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

3.2 DESCRIPTION OF TEST MODES

The EUT was pre-tested under the following resolution & horizontal synchronization speed modes:

- ◆ 1600x1200 mode (75Hz/94kHz),
- ◆ 1280x1024 mode (85Hz/91kHz),
- ◆ 640x480 mode (60Hz/31.5kHz)

The worst emission levels were found when the EUT was tested under **1600x1200 mode (75Hz/94kHz)** resolution. Therefore, only the test data of EUT tested under this mode is recorded in this report.

3.3 DESCRIPTION OF SUPPORT UNITS

4.2.3 TEST PROCEDURE

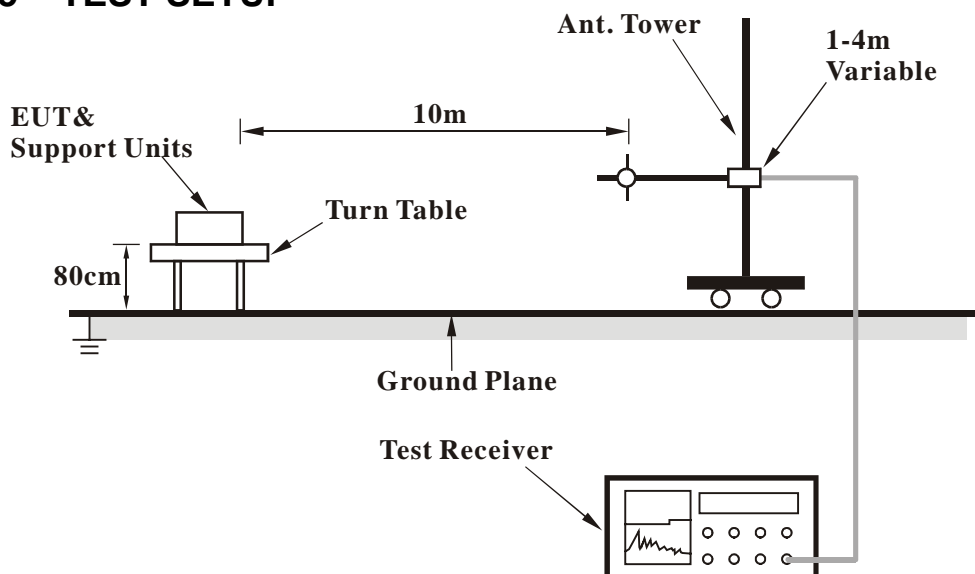

- The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 10-meter open field site. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would be re-tested one by one using the quasi- peak method or average method as specified and then reported In Data sheet peak mode and QP mode.
- g. For measurement of frequency above 1000 MHz, the EUT was set 3 meters away from the interference antenna and the detect function was set to Peak or Average.
