

EXHIBIT 5

Section 2.1033 (c)(8)

The dc voltages applied to and the dc currents into the several elements of the final radio frequency amplifying device for normal operation over the power range.

The dc voltages and dc currents operating in the PCS Dual Radio Module (PDRM) transceiver, 44WR53, subject of this application for certification, are constant values and do not vary with adjustments to carrier frequency or power level. The values are summarized as follows:

<u>Vdc</u>	<u>Idc (constant)</u>
+5.0 V	0.8 A
+3.3 V	1.0 A
+5.0 V	1.7 A
-5.0 V	60 mA
+8.0 V	1.2 A

Section 2.1033 (c)(8)

Tune-up procedure over the power range, or at specific operating power levels.

The PCS Dual Radio Module (PDRM), 44WR53, subject of this application for certification, can not be “tuned-up” by the user. There are no user tune-up features. All tuning is performed by the manufacturer during, and as part of, the manufacturing process.
