

APPLICANT: Lucent Technologies

FCC ID: AS5CMP-32

EXHIBIT 4

Section 2.1033 (c)(8)

The dc voltages applied to and the dc currents into the several elements of the final radio frequency amplifying device for normal operation over the power range.

The dc voltages and dc currents operating in the Cellular Dual Radio Module (CDRM) transceiver, 44WR54, subject of this Class II Permissive Change request, are constant values and do not vary with adjustments to carrier frequency or power level. The values are summarized as follows:

<u>Vdc</u>	<u>Idc (constant)</u>
+5.0 V	0.8 A
+3.3 V	1.0 A
+5.0 V	1.7 A
-5.0 V	60 mA
+8.0 V	1.2 A

These values have not changed from the initial filing for equipment certification.

Section 2.1033 (c)(8)

Tune-up procedure over the power range, or at specific operating power levels.

The Cellular Dual Radio Module (CDRM) transceiver, 44WR54, subject of this Class II Permissive Change request, can not be “tuned-up” by the user. There are no user tune-up features. All tuning is performed by the manufacturer during, and as part of, the manufacturing process.

There is no change from the initial filing for equipment certification.
