

APPLICANT: Lucent Technologies

FCC ID: AS5CMP-32

EXHIBIT 17

Section 2.1053 Measurements Required: Field Strength of Spurious Radiation

The modifications to the Analog Cellular Dual Radio Module (CDRM) transceiver, 44WR54, which enable Analog operation resides solely in specific firmware and in external software control. Since "Analog operation" is the subject of this Class II Permissive Change request, there is no modification or change that could affect the radiated spurious emission characteristics as previously reported under the initial application for AS5CMP-32. In accordance with Part 2.1043(b)(2) *Changes in Certified Equipment*, only the characteristics affected need to be evaluated. Therefore, measurement of radiated emissions was not repeated.
