

Exhibit 4

Section 2.1033 (c)(10): Description of circuitry and devices for suppression of spurious radiation.

Response:

Spurious emissions radiated from AS5ONEBTS-24 BTS are suppressed by implementing sound Electromagnetic Compatibility (EMC) design practices extending from the circuit board level to the system level: 1) grounded RF shielding on coaxial cables, 2) grounded RF shielding on the circuit packs, 3) effective grounding throughout, and 4) effective transmit and receive bandpass filters.
