

OCCUPIED BANDWIDTH

(FOR 25 kHz CHANNELIZATION)

Method of Measurement Per 2.989 (c,1) Data on Occupied Bandwidth is presented in the form of a spectrum analyzer plot which illustrates the transmitter sidebands. A plot is taken of the carrier sideband modulated with a 2500 Hz tone at a level 16 dB greater than that required to produce 50 percent modulation. (The spectrum analyzer grid indicates the reference level of the carrier unmodulated in all exhibits.)

SECTION 3B
Telephony

$$B_n = 2M + 2DK \text{ where}$$

$$\begin{aligned} M &= 3000 \text{ Hz} \\ D &= 5000 \text{ Hz} \\ K &= 1(\text{assumed}) \end{aligned}$$

$$\begin{aligned} B_n &= 16000 \text{ Hz} \\ \text{Therefore, Emission Designator} &= 16K0F3E \end{aligned}$$

SECTION 3C
Telephony

$$B_n = 2(B/2) + 2DK \text{ where}$$

$$\begin{aligned} B &= 9600 \text{ Hz} \\ D &= 3200 \text{ Hz} \\ K &= 1(\text{assumed}) \end{aligned}$$

$$\begin{aligned} B_n &= 16000 \text{ Hz} \\ \text{Therefore, Emission Designator} &= 16K0F1D(\text{Data}), \\ &16K0F1E(\text{Digital Voice}) \end{aligned}$$

OCCUPIED BANDWIDTH

(FOR 12.5 kHz CHANNELIZATION)

Method of Measurement Per Data on Occupied Bandwidth is presented in the form of a spectrum analyzer plot which illustrates the transmitter sidebands. A plot is taken of the carrier sideband modulated with a 2500 Hz tone at a level 16 dB greater than that required to produce 50 percent modulation. (The spectrum analyzer grid indicates the reference level of the carrier unmodulated in all exhibits.)

Section D,E
Telephony

$$B_n = 2M + 2DK \text{ where}$$

$$M = 3000 \text{ Hz}$$

$$D = 2000 \text{ Hz}$$

$$K = 1 \text{ (assumed)}$$

$$B_n = 10000 \text{ Hz}$$

Therefore, Emission Designator = 10K0F3E

Section E,F

$$B_n = 2(B/2) + 2DK \text{ where}$$

$$B = 4800 \text{ bps}$$

$$D = 1800 \text{ bps}$$

$$K = 1 \text{ (assumed)}$$

$$B_n = 8400 \text{ Hz}$$

Therefore, Emission Designator = 8K0F1D
