

FCC ID: AZ489FT7092
IC: 109U-89FT7092

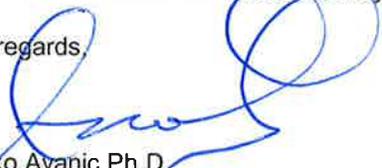

Dear Sir or Madam:

The main board modification that prompted the refiling for FCC for the CLP product line is in a region completely away and shielded from the Blue tooth module. The Bluetooth module is identical and has not changed from the original filing, furthermore the main board layout, grounding including all via interconnects in the region where the Bluetooth module is plugged in is identical to the original filing board. Thus we want to re-use the Bluetooth data from the original filing (FCC: AZ48FT4900/ IC: 109U-89FT4900).

As far as the combined system is concerned, we took data to verify the interoperability and radiation patterns meet all FCC requirements.

Please let me know if this is satisfactory for you to proceed.

Best regards,

Branko Avanic Ph.D.
