Inquiry on 08/03/2016 :

Inquiry:

To whom it may concern:

Motorola Solutions, Inc respectfully requests reuse of the BT data from filing AZ489FT4900.

We attest to the fact that the BT transmitter for FCC ID AZ489FT7092 is representative of the unit in the original filing for FCC ID AZ489FT4900 in regards to the RF parameter data.

The BT board in AZ489FT7092 is identical to the BT board in FCC ID AZ489FT4900. The difference is the LMR board layout.

Included in this request are the following attachments:

The BT data from the original filing. The external photos submitted for the original filing. The external photos for the new filing. An attestation from the Engr in support of the comments noted above.

Please let us know if we can reuse the BT data for the new filing? Please also let us know that if granted to use this BT data would the TCB still be required to do a PAG when the application is filed?

Thanks for your prompt attention on this matter.

FCC response on 08/03/2016

Your explanation for re-use data is acceptable. You need to make sure that when filling the application that you provide a cover report exhibits in the test report folder explaining the details of the data being re-used organized as provided in the attachment :Re-use data - V5. This exhibit references the actual FCC IDs of the original, explains your justification and the spots checks you did or confirm the validity of the re-use data. You need to reference that location of the original test report as either included as an exhibit with the new referenced applications or to the FCC ID original filing. IF included in the new filing make sure that the report is complete and identifies it by the original FCC ID and equipment class. The idea is that when reviewing the variant test data for all equipment classes that the person reviewing can simply follow the reuse cover explanation to review the data.
