Subject : Request for Class II Permissive Change
FCC ID : AZDK30326
Original gant date : March 17, 2010
Applicant : Canon Inc.

To Whom It May Concern:

This is to request a Class II permissive change for FCC ID: AZDK30326, originally granted on March 17, 2010.

We changed the following components from the original model.

- Capacitor
- IC

This change is not a chip replacement of a portion of the transmitter that performs some sub-function such as an amplifier chip, oscillator chip or frequency determining chip.

The new components meet the following conditions;

- They are electrically identical to the old components.
- The radio parameters (e.g. output power, frequency) are the same with the old components.

Additionally, this time, we performed the testing and confirmed that this product still meets the minimum requirements of the applicable rules of FCC. Based on the test result, it can be considered a Class II permissive change. Please refer to the test report submitted with this application.

Please refer to attached "Parts List", "Block Diagram" and "Photo" for details of these modifications.

Thank you for your attention to this matter.

Sincerely yours,

Atsushi Kolzumi
Manager
Canon Inc.
