868/915 MHZ FLEXIBLE ANTENNA

1.0 SCOPE

This Product Specification covers the mechanical, electrical and environmental performances specification for 868/915 MHz Flexible Antenna.

2.0 PRODUCT DESCRIPTION

2.1 PRODUCT NAME AND SERIES NUMBER (S)

Product name: 868/915MHz Flexible Antenna

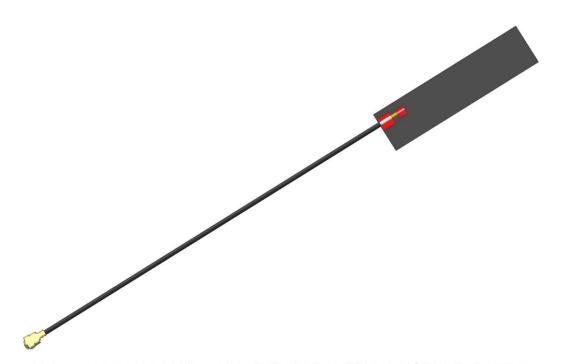

Series Number: 211140*

2.2 DESCRIPTION

211140 is a monopole flexible antenna for ISM 868/915MHz dual band. Antenna size 38x10x0.1mm is made from flexible polymer material, cable standard length 100mm. It can be easily installed by simply "peel and stick" on non-metal surface.

2.3 FEATURES

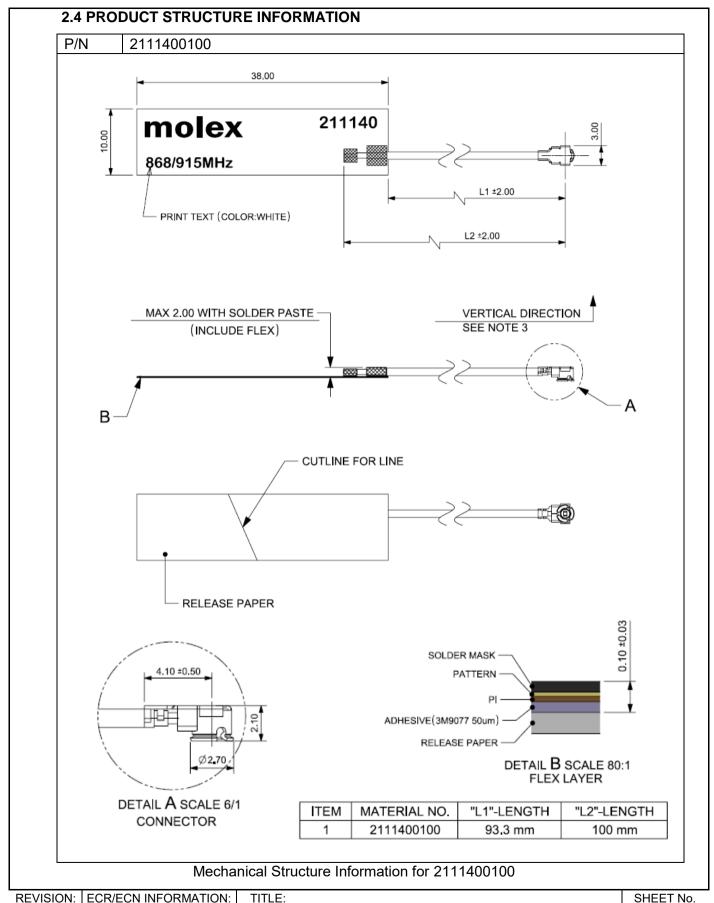

- ISM 868/915MHz dual band
- Antenna size 38x10x0.1mm
- IPEX MHF (U.FL compatible) connector
- Cable OD1.13mm, standard length options for 100 mm
- Cable and connector can be customized
- RoHS Compliant

Molex 2111400100 868/915 MHz FLEXIBLE ANTENNA MODULE 3D VIEW

3.0 APPLICABLE DOCUMENTS

Document Number		Description
Sale Drawing(SD)	SD-2111400100	Mechanical Dimension of the product
Application Guide(AS)	AS-2111400100	Antenna Application and surrounding
Packing Drawing(PK)	PK-2111400100	Product packaging specifications

4.0 GENERAL SPECIFICATION

Product name	868/915 MHz Flexible Antenna			
Part number	211140	00100		
Frequency	868-870 MHz 902-928 MHz			
Polarization	Line	ear		
Operating with matching	-40°C to	985℃		
Storage with matching	-40°C to 85°C			
RF Power	2 Watts			
Impedance with matching	50 Ohms			
Antenna type	Fle	Х		
Connector type	U.FL (MHF o	compatible)		
User Implementation type	Adhesive 3	3M 9077		
Cable diameter	Ø1.13	Bmm		
Single weight	0.626 g (P/N For 2111400100)			
Cable length	100 mm (P/N for 2111400100)			

	REVISION:	ECR/ECN INFORMATION: EC No: 608264 DATE: 2018/12/03	868/915 Pro	4 of 7		
DOCUMENT NUMBER:		T NUMBER:	CREATED / REVISED BY:	CHECKED BY:	<u>APPR</u>	OVED BY:
PS-2111400100		-2111400100	Kang Cheng 2018/11/20	Cooper Zhou 2018/11/20	Stary Son	g 2018/11/20

5.0 ANTENNA SPECIFICATION.

5.1 ELECTRICAL REQUIREMENT

5.1.1 ELECTRICAL REQUIREMENTS FOR CABLE LENGHTH 100mm					
P/N	2111400100				
Frequency Range	868-870MHz 902-928MHz				
Peak Gain(Max)	0.3dBi	1.0dBi			
Average Total efficiency	>55%	>60%			
Return Loss	< -5 dB				

Note that the above antenna performance is measured with just the antenna mounted on a PC/ABS block to similar a free-space condition. When implement into the system, the frequency resonant might be off-tune due to the loading of surrounding components especially metal plane. This off-tune can be compensated through matching. Although module manufacturers specify a peak gain limit, it is based on free-space conditions. The peak gain will be degraded by 1 to 2dBi in the actual implementation as the radiation pattern will change due to the surround components. As such, during selection of antenna, you can select one with high peak gain to compensate for the loss. Molex can offer assistant to choose the best location and best tuning in-order to meet this peak gain requirement.

6.0 MECHANICAL SPECIFICATION

DEVICION, ECD/ECN INFORMATION, TITLE.

DESCRIPTION	TEST CONDITION	TEST RESULT
Pull Test	Test machine: Max intelligent load tester Stick the flex antenna on a plastic board, pull cable in axial direction.	Pull force >8N
Un-mating force (connector)	Solder the receptacle connector to the test board ,then place the board and plug on push-on/pull-off machine, and repeat mating and un-mating 30 cycles at a speed 25±3mm/min. along the mating axis.	Un-mating force : 0.5 kgf min

7.0 ENVIRONMENTAL SPECIFICATION

DESCRIPTION	SPECIFICATION
	1.The device under test is kept for 30 mins in an environment with a temperature of -40 ℃.
	2. Kept for 4 Hours in an environment with a temperature of 85 degrees and a relative humidity of 95%.
Tanananakana (Ilbanaidika aradian	3. Kept for 2 Hours in an environment with a temperature of 125 degrees and a relative humidity of 95%.
Temperature /Humidity cycling	4. The cycle is repeated until a total of 40 cycles have been completed. Hereafter the conditions are stabilized at room temperature. Transfer temperature 8°C per min.
	5. Parts should meet RF spec before and after test.
	No cosmetic problem (No soldering problem; No adhesion problem of glue.)
Temperature Shock	 1.The device under test at -40 °C⇔125 °C by 100 cycles, Dwell of 30 mins, transition time between Dwell 30 secs (~ 61 mins / cycle) and each item should be measured after exposing them in normal temperature and humidity for 24 h. 2. Parts should meet RF spec before and after test.
	No cosmetic problem (No soldering problem; No adhesion problem of glue) .
	1.Temperature:125°C, time:1008 hours 2.There is no substantial obstruction to air flow across and
High Temperature	around the samples, and the samples are not touching each other
	3. Parts should meet RF spec before and after test.
	4. No cosmetic problem (No soldering problem; No adhesion problem of glue) .
Salt mist test	The device under test is exposed to a spray of a 5% (by volume) resolution of NACL in water for 2 hours. Thereafter the device under test is left for 1 week in room temperature at a relative humidity of 95%. The cycle is repeated until a total of 2 cycles have been completed. Here after the conditions are stabilized at room temperature.
	Parts should meet RF spec before and after test.
	3. No visible corrosion. Discoloration accept.
