

## Declaration of Product Modifications

The product, Point of Sales Payment Terminal, has been granted by FCC dated 04/02/2008. Now we, VeriFone Inc., would like to change of the authorized equipment for PC II change.

The differences are listed as below:

1. The update is for implementing a jump-line into the PCB board by laying a circuit line at power supply section, and does not affect any RF hardware, and software. There is no components change, and the radiated spurious emissions, 2.1053, has already been tested, and met the requirement.
2. Except the listing above, all the others are the same as the previous version.
