

### 1000A Operational Description:

The 1000A device is a base mounted 434.4 MHz remote control charger and locator transmitter. It utilizes a momentary pulsed transmitter for operation. When the find button is depressed, It sends the pulsed signal to the programmed remote control device in order to find it's location. It is also utilized for charging the remote control device. It is powered on with 5 VDC which is achieved by utilizing either an AC/DC Power Adapter or a USB Power.
