

Model HR13A Operational Description

The model HR13A is a radio frequency remote control transmitter utilized to activate an X-10 transceiver (RR501 or TM751) or any X-10 security base receiver. The device transmits when the user of the remote control depresses any of the buttons. When a button is depressed the 310.00 MHz pulsed RF transmitter transmits the appropriate pulse code to activate the transceiver.
