

IR27A Operational Description - 310 and 418 MHz Pulsed Transmitter:

The IR27A is a universal remote control which contains a 310 and 418 MHz radio frequency pulsed transmitter. The transmitter is used to operate common features of most brands of infrared controlled devices.

The Radio Frequency Pulse Coded message is activated when the user depresses any of the buttons. When the command is activated, the 310 or 418 MHz transmitter sends the appropriate commands to the receiving equipment. The 418 MHz transmitter section activates other receiving equipment that may utilize infrared signals which utilizes the same data format. This can be achieved by selecting the proper keys.
