

VT46A Operational Description:

The VT46A is a 2.4 GHz FM transmitter. The transmitter operates on one of 4 user selectable channels, A, B, C & D. Their respective frequencies are 2414 MHz, 2431 MHz, 2450 MHz and 2468 MHz.

The VT46A takes the Left, Right and Composite Video Inputs and FM modulates the 2.4 GHz carrier. The signal is then transmitted via a patch antenna to the VR46A, 2.4 GHz receiver, where the process is reversed.
