(651) 777-2690

1. Introduction

This device is a wireless Control Panel with a transmitter for use in a wireless security system. The unit is self-contained and powered by an 8VAC Class 2 transformer, and four 1.2V Ni-Cad batteries, used as a back up power supply. The transmitter's frequency is crystal controlled and is not adjustable by the user. The device measures approximately 3.75" in width, 1.72" in depth and 7.75″ in height. The unit weighs approximately 8 ounces without batteries.

We are requesting Certification under FCC Rules, Part 15, Subpart C, Paragraph 15.231.

Please send comments/suggestions on the report format to:
KenL.Nelson@Interlogixinc.com.

2. Statement of Compliance

§2.907 **Certification**

This is an application for certification

§2.911 **Application**

a) This is an application and has been filed electronically with form 731.
b) All information required has been supplied.
c) The applicant has signed the application (electronically).
d) The technical data has been signed.
(See Radiated Emissions)
e) Applicant signature block on electronic form 731 completed by officer of the company or authorized company personnel.
f) The appropriate fee has been paid electronically with VISA on 2/5/02.

§2.915 **Grant**

This application demonstrates that all applicable technical standards have been met and a grant of this application will serve the public interest.

§2.925 **Label**

Each piece of equipment for which authorization will be granted will be uniquely identified with "FCC ID: B4Z-785B-ALGRO." The required statement will appear with the FCC ID on the product and, although not required, in the installation instructions. See Exhibit A, PDF file *id_label.pdf*

§2.947 Measurement Procedure

a) The measurement procedure follows ANSI C63.4 procedure. Procedural notes are contained in the laboratory report.

d) A list of test equipment used is contained in the laboratory report.

§2.948 Description of Measurement Facilities

Measurements were performed at TUV Testing Services Open Test Site. The FCC keeps a full description of the measurement facilities on file. TUV's acceptance and approval is dated as December 5, 1993 in a letter received from the FCC.

The address of the test facility is:
TUV Product Service
19035 Wild Mountain Road
Taylors Falls, MN 55084-1758

Phone: 651-638-0297
Contact: Joel Schneider
Test Engineer in Charge

See Exhibit F, PDF file *test_pho.pdf* for sketch of measurement setup

§2.1033 Application for Certification

a) Form 731 has been electronically filed on 2/5/02. Items that did not apply were left blank.

b) This technical report contains the following information where applicable.

1) Full name and mailing address of manufacturer and applicant for certification:
Interactive Technologies Inc
2266 North Second Street
North Saint Paul, MN 55109

2) FCC Identifier:
B4Z-785B-ALGRO

3) Copy of installation instructions:
See Exhibit G, PDF file: *user_man.pdf*

4) Brief Description of circuit functions and device operation:
See Exhibit I, PDF file *op_desc.pdf*

See Exhibit D, PDF file *schemat.pdf* for schematics (page 1) and parts placement (page 2) diagrams.

5) Block Diagram
   See Exhibit C, PDF file *block.pdf*.
6) Report of the measurements of radiation and conducted emissions:
   This document.
7) Photographs
   External:
   See Exhibit B, PDF file *extern.pdf*
   Internal:
   See Exhibit H, PDF file *intern.pdf*
8) Peripheral or Accessory devices:
   This is not applicable since this device is stand-a-lone product.
9) Transition Rules
   This application is not pursuant to the transition rules of §15.37
10) Emergency Broadcast decoding:
    This is not applicable to device in this application.
11) Application for direct sequence spread spectrum devices...
    This is not applicable to device in this application.
12) Application for scanning receivers...
    This is not applicable to device in this application.

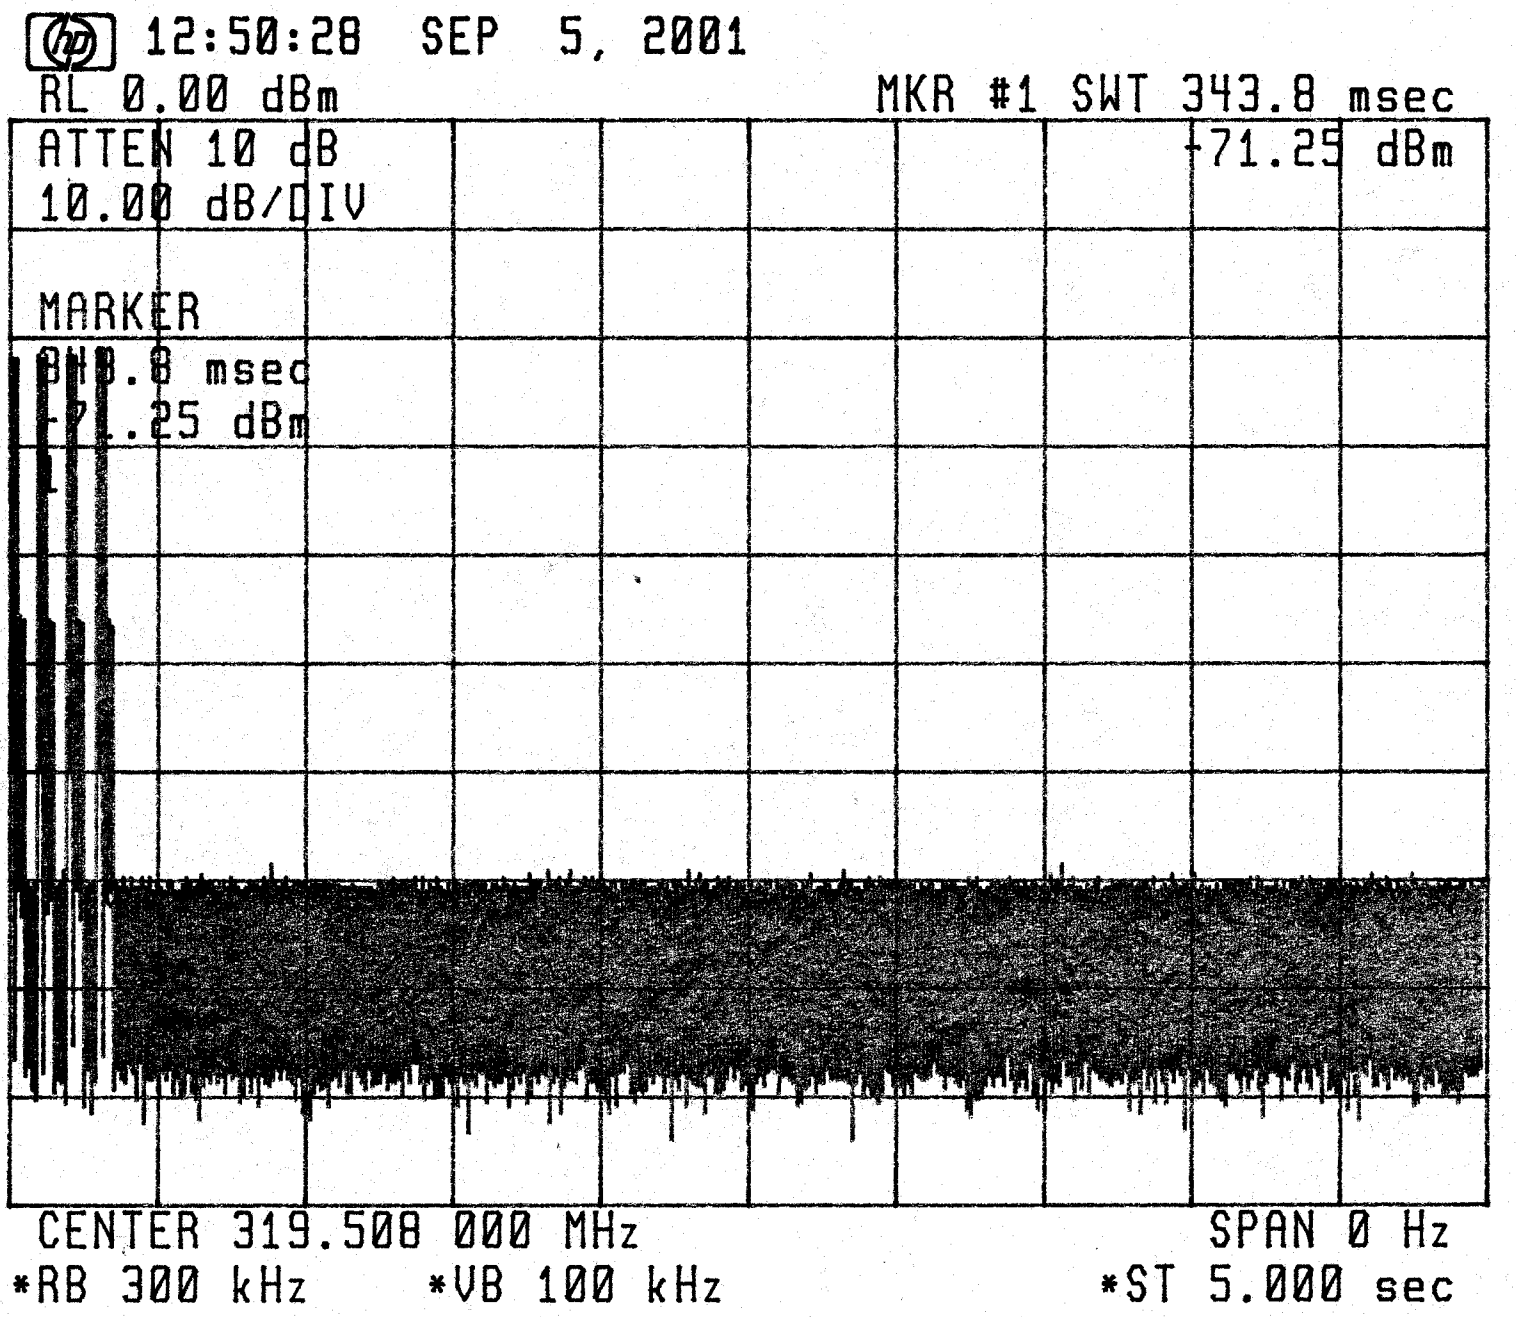
c) Composite Systems
This is not applicable to device in this application.

3. Lab Measurements Discussion / Test Notes

3.1 Test Notes

3.1.1 Transmissions shall cease within 5 seconds of activation [§15.231(a)(2)]
In the event of an alarm, 4 packet is sent. The packet duration is, at most, 30 mS, see **Duty Cycle Correction Factor [§15.231(b)(2) and §15.35(c)].**

The following plot shows a 4 packet transmission that concludes in less than 5 seconds.



12:50:28 SEP 5, 2001

3.1.2 Supervisory Calculation [**§15.231(a)(3)**]

As permitted, this device will transmit one packet, in low power, for supervision purposes. The packet itself may be as long as 30 ms depending on the data sent.

3.1.3 Duty Cycle Correction Factor [**§15.231(b)(2)** and **§15.35(c)**]

The transmitter employs amplitude modulation and transmits 80 bits. Each bit, except for one, has an "ON" time of 122 µS. One bit has an on time of 366 µS. The total on time of a single packet is:

79 * 122 µS + 366 µS = 10.00 mS.

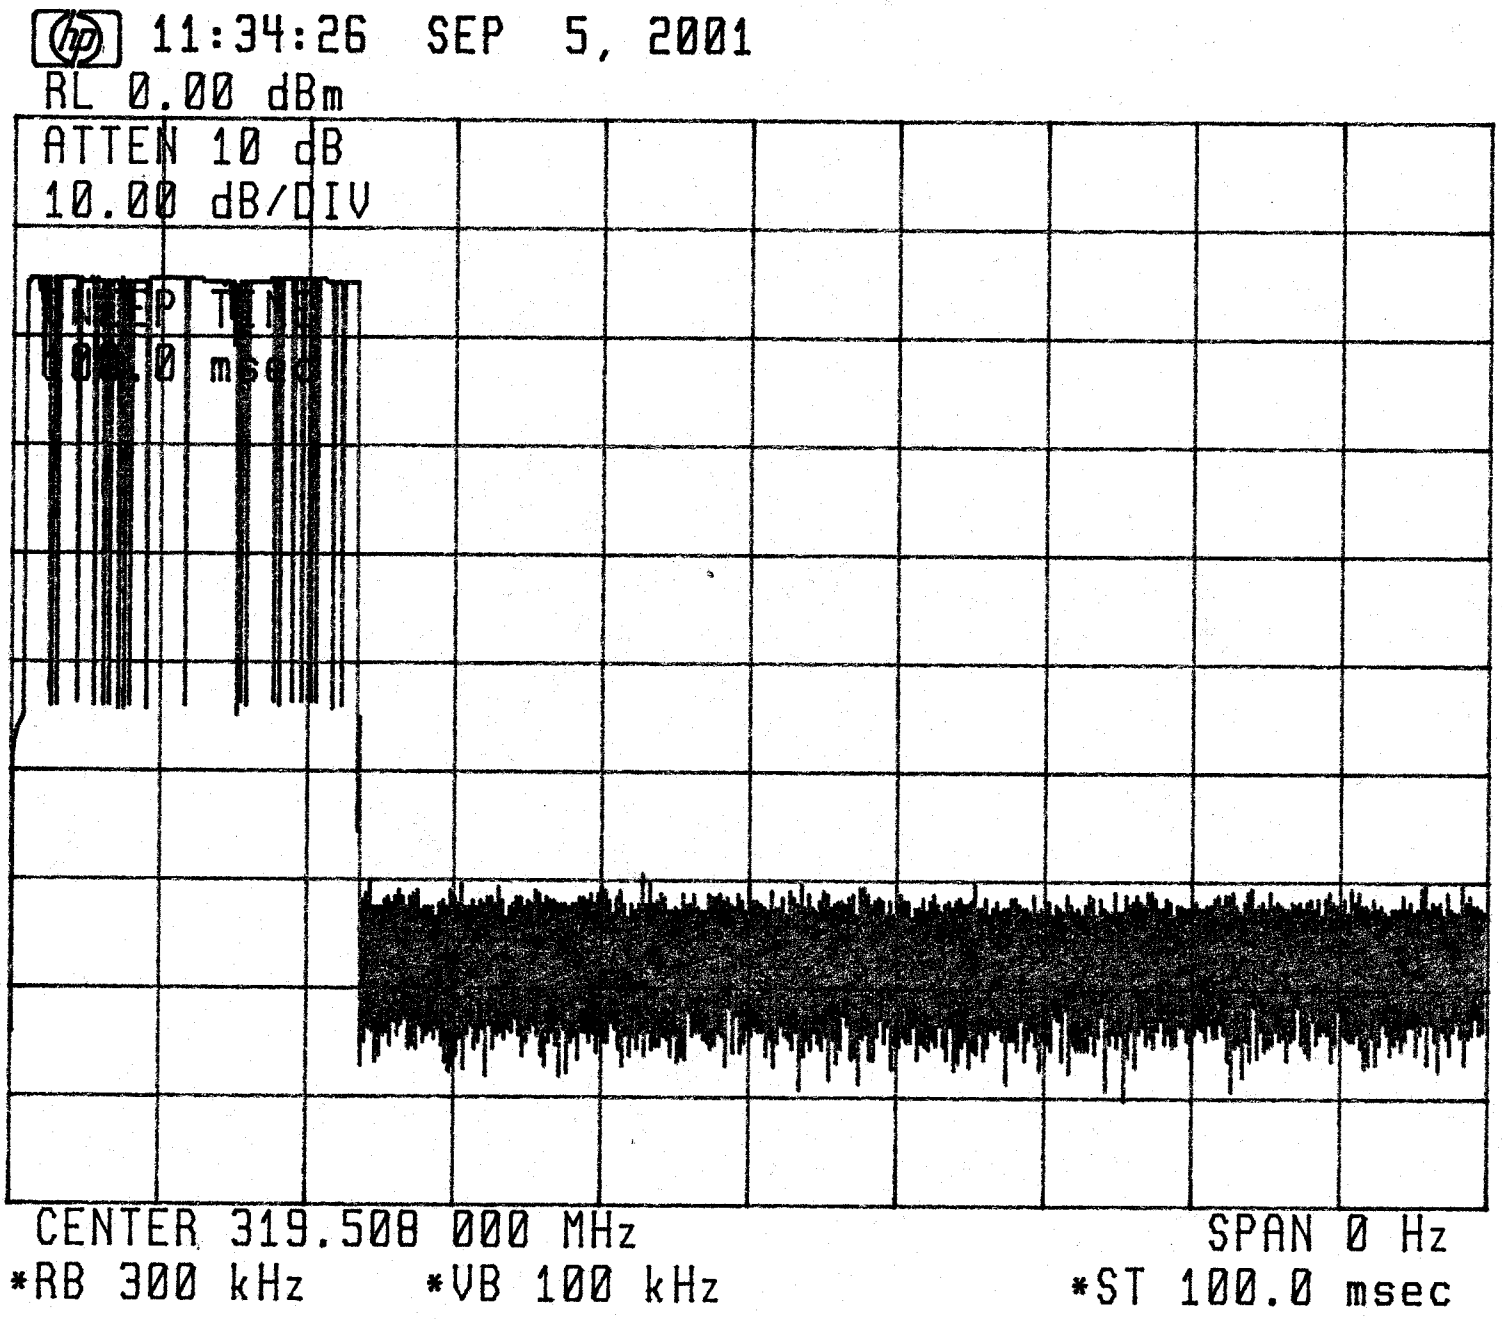
Only one packet is sent in any given 100 mS window for a duty cycle correction factor of:

20*LOG(10.00 /100) = -20.00 dB

The maximum allowed correction factor is 20 dB.

The following plots show:

1. Single packet in 100 mS window.
2. Expanded view of a packet with a duration of 26.00 mS



11:34:26 SEP 5, 2001

3.1.4 Bandwidth Measurement [**§15.231(c)**]

Bandwidth Measurements were made in peak mode, using a Hewlett Packard Spectrum Analyzer, model number 70000.

The spectrum analyzer 20 dB skirt bandwidth is 3.4 KHz.

The allowed 20 dB bandwidth is 0.25% of center frequency.

Estimated signal bandwidth = Measured signal bandwidth - analyzer bandwidth.

Center Frequency MHz	Measured 20 dB Bandwidth in KHz	Estimated 20 dB signal Bandwidth in KHz	FCC allowed 20 dB Bandwidth in KHz
319.5	49.8	46.4	799

The following three plots show:

3.1.5 Emissions Measurements

3.1.5.1 Radiated Emissions Summary

The Allegro Control Panel passes FCC Rules Part 15, Subpart C, Paragraph 15.231. The highest fundamental radiated emission was 3.6 dB below the FCC limit at 319.5 MHz. The highest spurious emission measurement was 9.9 dB below the FCC limit at 1597.52 MHz. The highest forbidden band emission was 8.1 dB below the FCC limit at 1597.52 MHz.

3.1.5.2 FCC Emissions Calculation

3.1.5.2.1 Terms

Term	Abbreviation	Units	Description
Analyzer Reading	AR	dBµV	The power reading read directly from the analyzer without any correction for cabling or receive antenna.
Duty Cycle Correction	DC	dB	Correction for averaging measurement, see **Duty Cycle Correction Factor [§15.231(b)(2) and** §15.35(c)]
Antenna Factor	AF	dB	Calibration factor for measurement antenna which converts from dBµV measured with antenna to the field strength received by the antenna in dBµV/M.
Cable Loss	CL	dB	Amount of power lost in cable (and connectors, if any) between antenna and analyzer
Pre-Amp	PA	dB	Gain in pre-amp

3.1.5.2.2 Example Calculation

AR = 99.3 dBµV
AF = 13.9 dB
CL = 3.8 dB
DC = 20 dB
PA=26.2 dB

The field strength for comparison to FCC limits is found to be:

AR + AF + CL –DC - PA = 99.3 + 13.9 + 3.8 -20 –26.2= 70.8 dBµV/M

Alternatively, the AR + AF +CL -PA is compared to the FCC limit + DC. This number is often written to the right of measurement data on the test results. For example, the FCC limit for ITI transmitters at 319.5 MHz is approximately 95.8 dBµV/M. The limit from §15.231(b) with linear interpolation yields a limit, without consideration for duty cycle, of approximately 75.8 dBµV/M.

To convert to µV/M the following equation is used:

µV/M = INVLOG(dBµV/M / 20)

For the above example, 70.8 dBµV/M is 3,467.369µV/M

3.1.5.3 *Radiated Emissions*

The highest fundamental emission along with the three highest spurious and restricted band emissions are listed below as per ANSI C63.4 paragraph 10.1.8.2. Emissions from 0.009 MHz to the tenth harmonic were measured as per FCC Rules Part 15, Subpart C, Paragraph 15.33(a). Emission limits were derived from §15.231(b).

Frequency	Analyzer Reading	Duty Cycle Correction	Cable Loss	Antenna Factor	Pre-Amp	Field Strength	Field Strength	FCC Limit
MHz	dBuV	dB	dB	dB	dB	dBuV/M	uV/M	uV/M
319.5	102.60	20	3.9	14.0	28.2	72.30	4,121	6,229
1597.52	57.10	20	10.3	26.5	28	45.90	197	623
2130.07	50.60	20	11.6	29.9	27.5	44.60	170	623
1917.07	51.60	20	11.3	28.2	28.2	42.90	140	623

3.1.5.4 Forbidden Band4s

Noise floor of spectrum analyzer with antenna factors and duty cycle correction converted to µV/M at approximately one meter.

All measurements were taken with an HP 8566B Spectrum Analyzer. The bandwidth was 100 KHz for measurements below 1000 MHz. The bandwidth was 1 MHz for measurements above 1000 MHz. The video filter was off.
The noise floor measurements are summarized in the table below. See also the test data included in this report.
