4 General Information

4.1 Client Information

Applicant: Bosch Security Systems, Inc.
 Address of Applicant: 8601 East Cornhusker Highway Lincoln, Nebraska 68507 United States

Manufacturer: Relacart Electronics CO., LTD.
 Address of Manufacture: 1408, Building B, Poly Fengxing Plaza, No. 242 Tian He Road, Tian He District, Guangzhou, Guangdong, China

4.2 General Description of E.U.T.

Product description: UHF Wireless Microphone
 Model No.: HT300

4.3 Details of E.U.T.

Power Supply: DC 3.0V Battery

4.4 Description of Support Units

The EUT has been tested as an independent unit.

4.5 Standards Applicable for Testing

The customer requested FCC tests for a UHF Wireless Microphone. The radiated emission test was performed according to the procedures of ANSI/TIA-603-C-2004 and FCC CFR47 Part 74.861, 2.1046, 2.1047.

4.6 Working Frequency of E.U.T.

Frequency Band : Band B .

4.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **FCC – Registration No.: 880581**

Waltek Services(Shenzhen) Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 880581, June 24, 2008.

- **IC – Registration No.: IC 7760A**

Waltek Services(Shenzhen) Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the Industry Canada. The acceptance letter from the Industry Canada is maintained in our files. Registration IC7760A, Aug. 03, 2010.

4.8 Test Location

All Emissions tests were performed at:-

1/F, Fukangtai Building, West Baima Rd., Songgang Street, Baoan District, Shenzhen 518105, Guangdong, China.

6 Conducted Emission Test

6.1 Conducted Emission Limit

Test Requirement:	FCC Part15.207 &Part 74
Test Method:	ANSI C63.4:2004
Test Result:	N/A
Frequency Range:	150kHz to 30MHz
Class:	Class B
Limit:	66-56 dB μ V between 0.15MHz & 0.5MHz 56 dB μ V between 0.5MHz & 5MHz 60 dB μ V between 5MHz & 30MHz
Detector:	Peak for pre-scan (9kHz Resolution Bandwidth) Quasi-Peak & Average if maximised peak within 6dB of Average Limit

6.2 Conducted Emission Data record

According to the rule of section 15.207(c), owing to the DC operation of EUT, this test is not performed.

7 Maximum Power Output

7.1 Rules and Limits

2.1046(a), ANSI/TIA-603-C-2004, Paragraph 2.2.1

74.861(e)(1): the power of the measured un-modulated carrier power at output of the transmitter power amplifier (antenna input power) may not exceed the following:

1. 54-72, 76-88 and 174-216 MHz bands--50mW
2. 470-608 and 614-806MHz bands--250mW

7.2 Test Equipment

Please refer to Section 5 this report.

7.3 Test Procedure

The maximum peak output power was measured with a spectrum analyzer connected to the antenna terminal (conducted measurement) while EUT was operating in normal situation. Set RBW of spectrum analyzer to 1MHz and VBW to 1MHz.

7.4 Test Setup BlockDiagram

7.5 Measurement Result

Test Frequency (MHz)	Spectrum Reading (dBm)	E.R.P. (mW)	Limit (W)
678.5 MHz	9.202	8.321	0.25
685.3 MHz	9.371	8.652	
693.5 MHz	9.051	8.037	

8 Modulation Characteristics

8.1 Rules and Limits

2.1047(a), ANSI/TIA-603-C-2004, Paragraph 2.2.6.

Voice modulated communication equipment, the frequency response of the audio modulating circuit over a range of 100Hz to 5000Hz shall be measured. For equipment required to have an audio low-pass filter, the frequency response of the filter or of all circuitry installed between the modulation limiter and the modulated stage shall be measured.

2.1047(b), ANSI/TIA-603-C-2004, Paragraph 2.2.3

Equipment which employs modulation limiting

74.861(e)(3), ANSI/TIA-603-C-2004

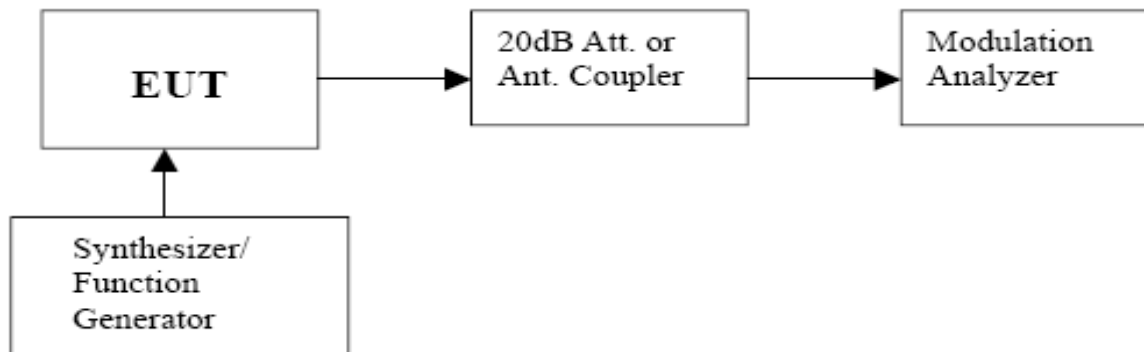

Any form of modulation may be used. A maximum deviation of ± 75 KHz is permitted when frequency modulation is employed.

8.2 Test Equipment

Please refer to Section 5 this report.

8.3 Frequency Response of Audio Modulation Circuit and Low Pass Filter Measurement

8.4 Condition & Setup

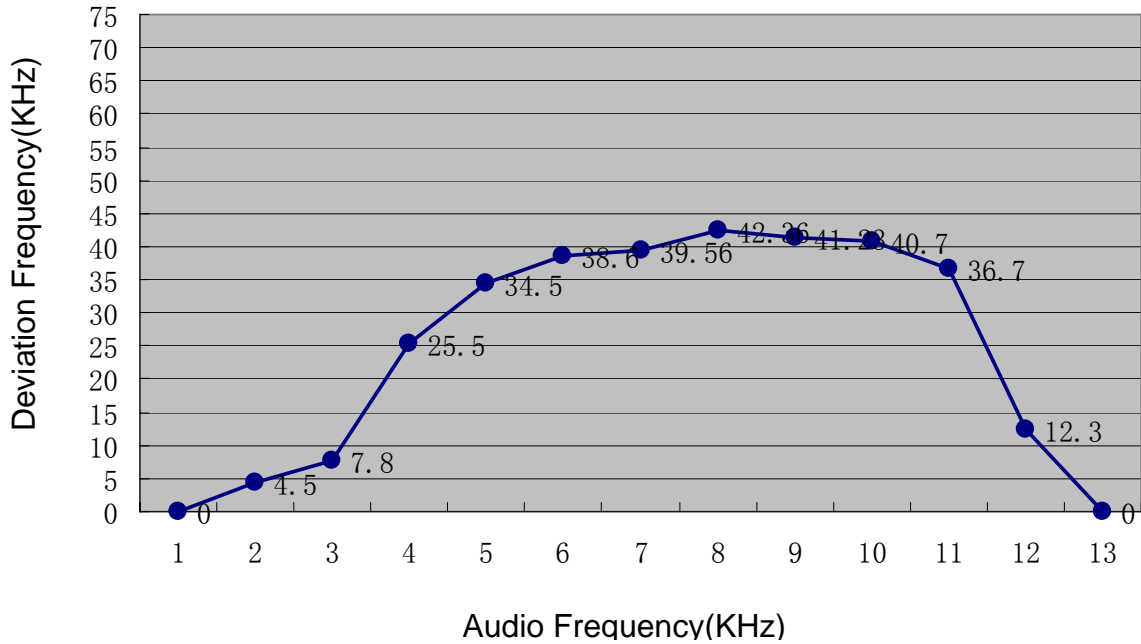

2.1047(a)

1. The EUT and test equipment were set up as shown on the above graph.
2. Adjust the audio input for 20% of rated system deviation at 1KHz using this level as a reference (0dB).
3. Vary the audio frequency from 100Hz to 15000Hz

8.5 Measurement Result

Test Frequency: 678.5MHz

Frequency Response

Test Frequency: 685.3MHz

Frequency Response

Test Frequency: 693.5MHz

Frequency Response

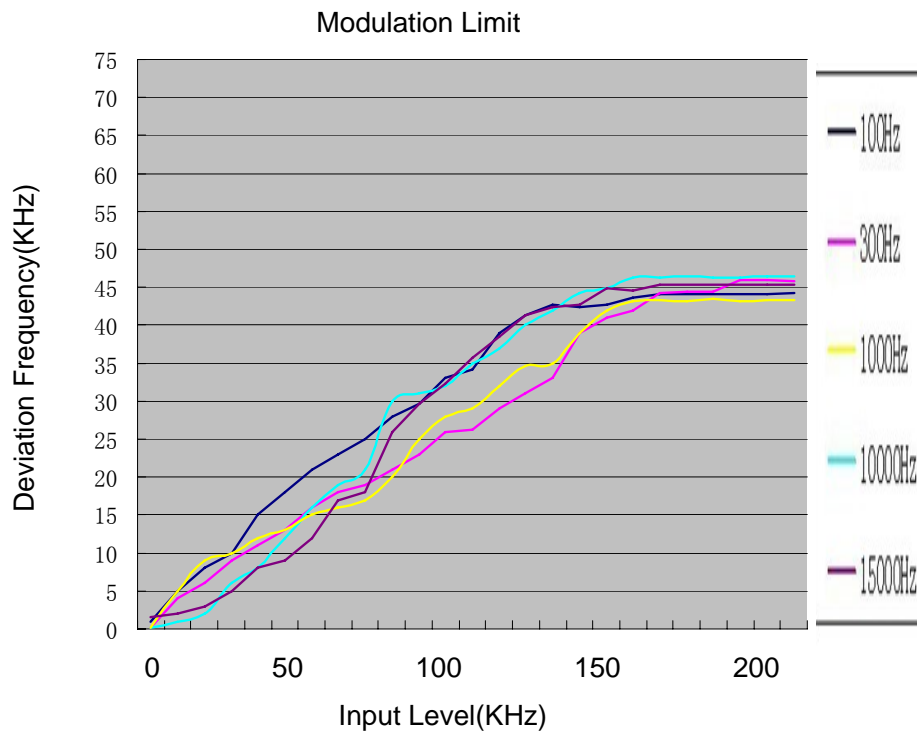

8.6 Modulation Limiting Measurement Condition & Setup

2.1047(b)

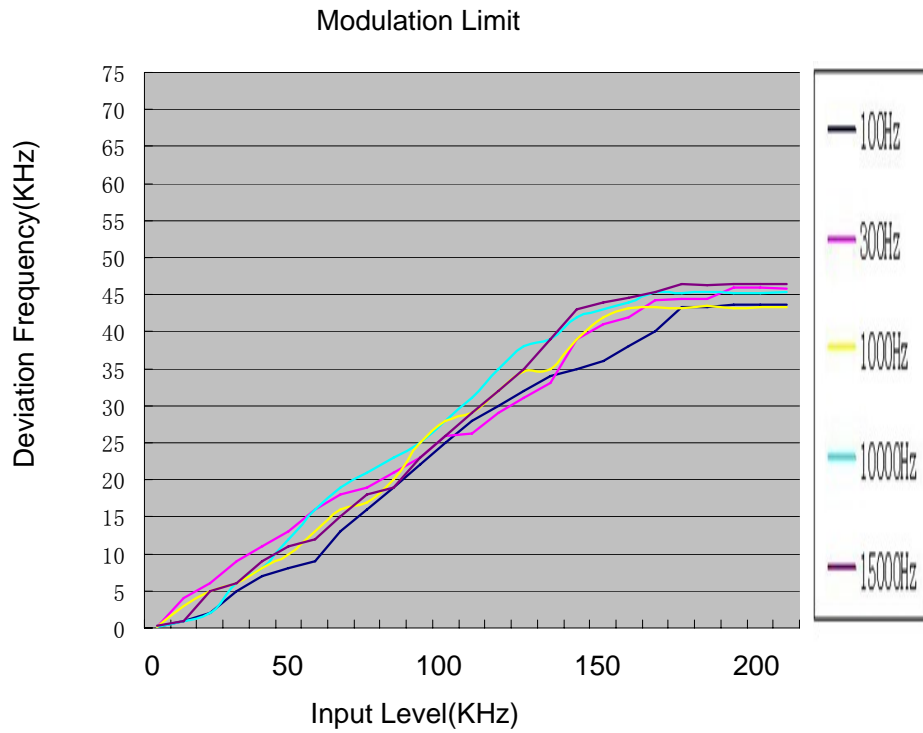

1. The Plus/Function generator was connected to the microphone of EUT, via an artificial mouth simulator.
2. Adjust the audio input frequency from 100Hz to 15000 Hz and the input level from 0V to maximum permitted input voltage with recording each carrier frequency deviation responding to respective input level.
3. Repeat step 2 with changing the input frequency for 100, 300, 1000, 10000 and 15000 Hz in sequence.

8.7 Measurement Result

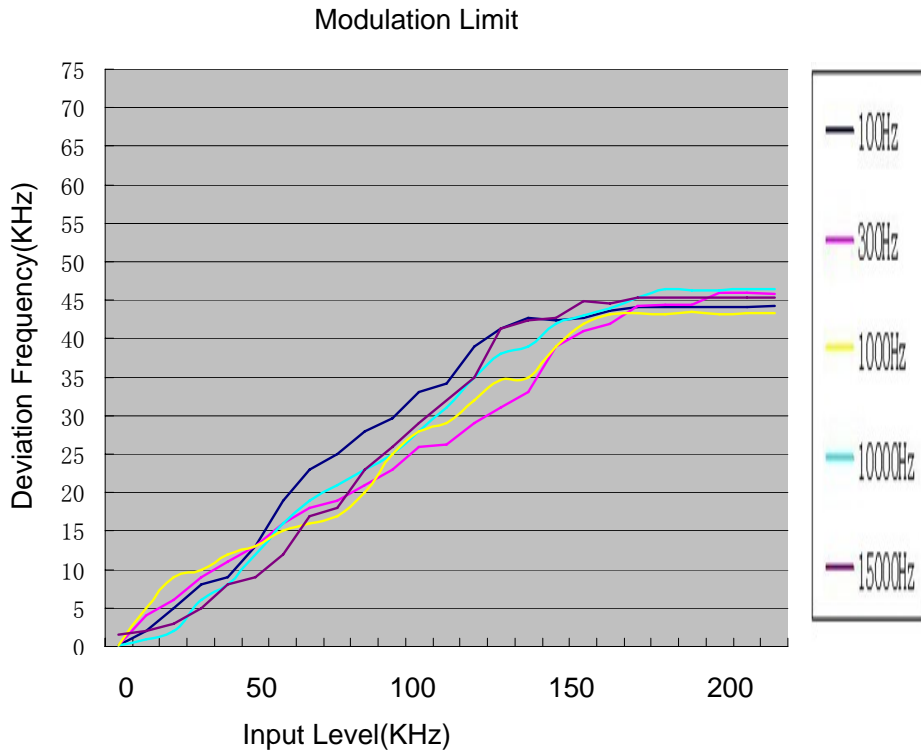

Test Frequency: 678.5MHz

Test Frequency: 685.3MHz

Test Frequency: 693.5MHz

9 Occupied Bandwidth

9.1 Rules and Limits

2.1049(c)(1): ANSI/TIA-603-C-2004, Paragraph 2.2.11

74.861(e)(3): Any form of modulation may be used. A maximum deviation of $\pm 75\text{kHz}$ is permitted when frequency modulation is employed.

74.861(e)(5): The operation bandwidth shall not exceed 200kHz.

9.2 Test Equipment

Please refer to Section 5 this report.

9.3 Test Procedure

1. Connect the EUT as above graph.
2. Plot the unmodulated chart shows on spectrum.
3. Set the output of the signal generator to 300Hz, 1kHz, 1.5kHz, 2.5kHz, 15kHz. Increase the amplitude of the signal, while monitoring the modulation meter. Until modulation is maximum measure the bandwidth under 26dB compared to the unmodulated fundamental carrier peak level of the modulated signal displayed on the spectrum analyzer.

9.4 Emission Designator

$$B_n = 2M + 2DK = (2 \times 2.5\text{kHz}) + (2 \times 45.6\text{kHz}) = 96\text{K2F3E}$$

Please refer to the plots hereinafter.

10 Antenna Conducted Emissions

10.1 Measurement Limit

Test Frequency(MHz)	Limit (dBm)
Above 1GHz	Less than -13dBm
Below 1GHz	Less than -13dBm

10.2 Measurement Procedure

The UUT was connected directly to a spectrum analyzer. The transmitter conducted spurious emissions were plotted and compared to the limits for both FCC 74.861 and RSS-123.

10.3 Measurement Setup Block Diagram

10.4 Measurement Result Record

Remark: the UUT was test from 30MHz to 10GHz,and above 3GHz,the signal of the UUT was lower than the equipment’s noise level, so the data show the 30MHz to 3GHz only.

Test Frequency 678.5MHz

Test Frequency 685.3MHz

Test Frequency 693.5MHz

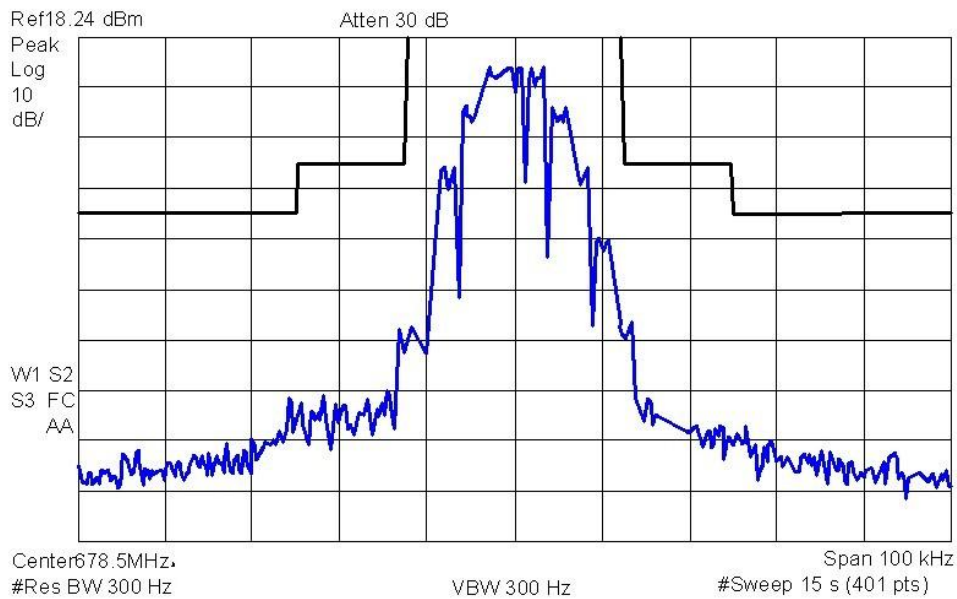

11 Emissions Mask

11.1 Measurement Procedure

- A) The EUT and test equipment were set up as shown below
- B) For EUTs supporting audio modulation, the audio signal generator was adjusted to the frequency of maximum response and with output level set for $\pm 2.5/\pm 1.25$ kHz deviation (or 50% modulation). With level constant, the signal level was increased 16 dB.
- C) For EUTs supporting digital modulation, the digital modulation mode was operated to its maximum extent.
- D) The Occupied Bandwidth was measured with the Spectrum Analyzer controls set as shown on the test results.
- E) The RB/VB=300Hz/300Hz,span to 100kHz,sweep time is 15s.

11.2 Measurement Result

Remark: The UUT was test the high/middle/low channel, and the worse case was the low channel of 678.5MHz, so the data show the 678.5MHz only.

12 Audio Frequency Response

12.1 Measurement Procedure

- A) The EUT and test equipment were set up such that the audio input was connected at the input to the modulation limiter, and the modulated stage.
- B) The audio output was connected at the output to the modulated stage.

12.2 Measurement Setup BlockDiagram

12.3 Measurement Result

13 Audio Input versus Modulation

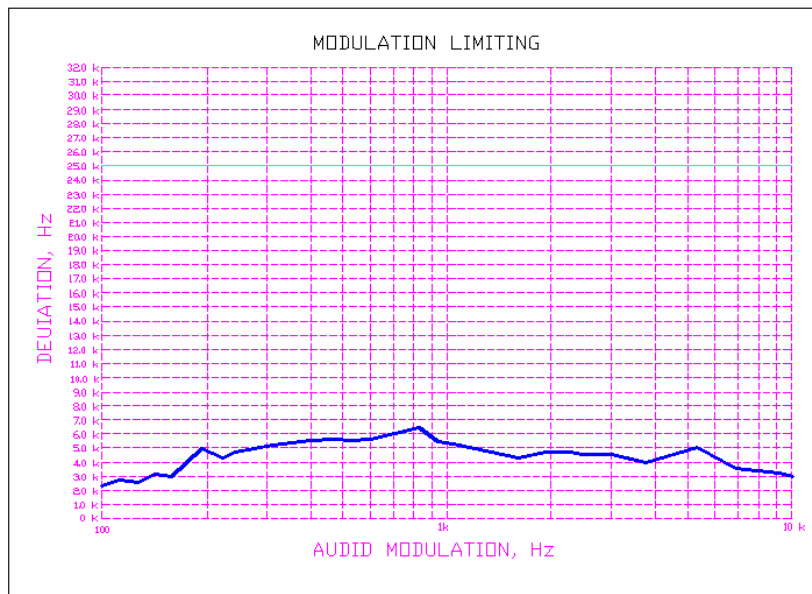

13.1 Measurement Procedure

- A) The signal generator was connected to the input of the EUT as shown below.
- B) The modulation response was measured for each of three frequencies (one of which was the frequency of maximum response), and the input voltage was varied and was observed on an HP 8901A Modulation Analyzer.
- C) The input level was varied from 30% modulation (± 1.5 kHz deviation) to at least 20 dB higher than the saturation point.
- D) Measurements were performed for both negative and positive modulation and the respective results were recorded.

13.2 Measurement Setup BlockDiagram

13.3 Measurement Result

14 Field Strength of Spurious Radiation

14.1 Rules and Limits

2.1053(a): ANSI/TIA-603-C-2004, Paragraph 2.2.12 and RSS-123.

Measurement shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuit, power leads, or intermediate circuit elements under normal conditions of installation and operation.

74.861(e)(6)(iii): Spurious and harmonics must be at least $43 + 10\log(\text{output power})$ below the carrier peak

2.1057: in all measurements set forth, the spectrum should be investigated from the lowest radio frequency generated in the equipment up to at least the 10th harmonic of the carrier frequency

14.2 Test Equipment

Please refer to Section 5 this report.

14.3 Test Procedure

1. Connected the equipment as above graph.
2. Place the transmitter to be tested on the turntable in the standard test site. The transmitter is Transmitting into a non-radiating load, which is placed on the turntable. The RF cable to this load should be of minimum length.
4. The output of the antenna shall be connected to the measuring receiver and either a peak or quasi-peak detector was used for the measurement as indicated on the report. The detector selection is based on how close the emission level was approaching the limit.
5. The transmitter shall be switched on; if possible, without the modulation and the measurement receiver shall be tuned to the frequency of the transmitter under test.

6. The test antenna shall be raised and lowered through the specified range of height until the measuring receiver detects a maximum signal level.
7. New battery were installed in the equipment under test for radiated emissions test, the transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
8. The test antenna shall be raised and lowered again through the specified range of height until the measuring receiver detects a maximum signal level.
9. The maximum signal level detected by the measuring receiver shall be noted.
10. The measurement shall be repeated with the test antenna set to horizontal polarization.
11. Replace the antenna with a proper antenna (substitution antenna).
12. The substitution antenna shall be oriented for vertical polarization and, if necessary, the length of the substitution antenna shall be adjusted to correspond to the frequency of transmitting.
13. The substitution antenna shall be connected to a calibrated signal generator.
14. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
15. The test antenna shall be raised and lowered through the specified range of the height to ensure that the maximum signal is received.
16. The input signal to substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuation setting of the measuring receiver.
17. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
18. The measurement shall be repeated with the test antenna and the substitution antenna oriented for horizontal polarization.
19. This is a handheld device, The radiation emission should be tested under 3-axes(X,Y,Z) position(X denotes lying on the table, Y denotes side stand and Z denotes vertical stand), After pre-test, It was found that the worse radiation emission was get at the X position. So the data shown was the X position only
20. The EUT was under working mode during the final qualification test and the configuration was used to represent the worst case results.

14.4 Measurement Result

Unmodulated carrier output power is 9.371dBm, or 8.652mW(ERP). The limit of spurious or harmonics is calculated as following:

$$9.371-[43+10\log(\text{carrier output power in W})], \text{ or } -13\text{dBm}$$

Test Frequency: 678.5MHz

Horizontal

Frquency (MHz)	Reading Amplitude (dBm)	Limit (dBm)	Margin (dBm)

15 Frequency Stability Tolerance

15.1 Rules and Limits

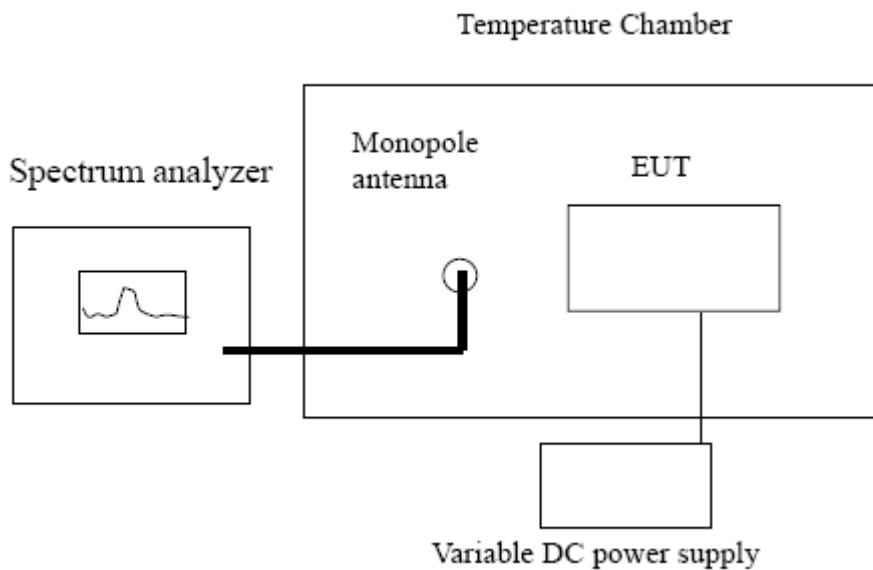

2.1055, ANSI/TIA-603-C-2004, Paragraph 2.2.2. and RSS-123.

74.861(e)(4): the frequency tolerance of the transmitter shall be 0.005 percent

15.2 Test Equipment

Please refer to Section 5 this report.

15.3 Temperature Variation Test Procedure

1. Place the EUT in the chamber, powered in its normal operation.
2. Set the temperature of the chamber -30 degree centigrade. Allow the equipment to stabilize at that temperature.
3. Measured the carrier frequency using preamplifier and frequency counter.
4. Repeated procedures 1 to 3 from -30 to 50 degree centigrade at internals of 10 degree.

15.4 Measurement Result

A plot and table is presented which illustrate compliance with the rule where the center frequency is 678.5MHz,685.3MHz,693.5MHz.

Test Frequency: 678.5MHz

Temperature Variation Table

Temperature(Centigrade)	Frequency (MHz)	Tolerance (MHz)
-30	678.49665	678.53393 to 678.46608
-20	678.50236	
-10	678.49756	
0	678.52345	
10	678.49867	
20	678.51261	
30	678.50362	
40	678.49887	
50	678.51254	

Test Frequency: 685.3MHz

Temperature Variation Table

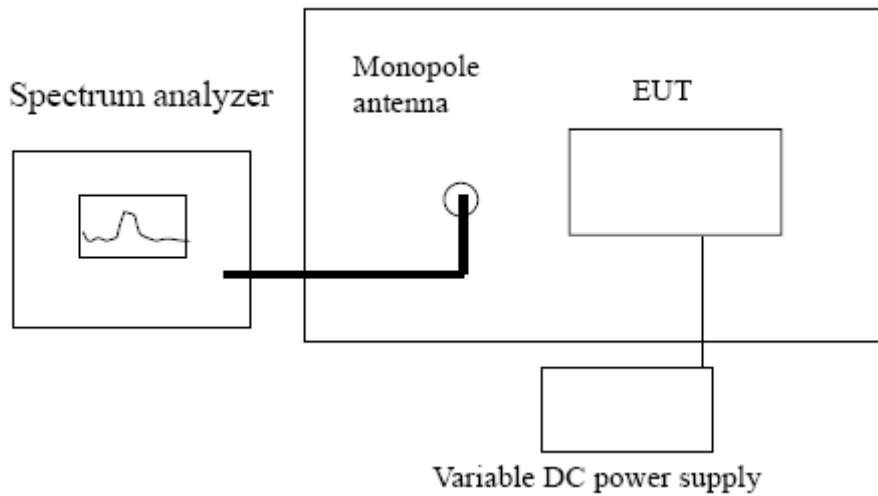

Temperature(Centigrade)	Frequency(MHz)	Tolerance(MHz)
-30	685.31521	685.33427 to 685.26574
-20	685.28988	
-10	685.31254	
0	685.31365	
10	685.31001	
20	685.30314	
30	685.30185	
40	685.29887	
50	685.30141	

Test Frequency: 693.5MHz

Temperature Variation Table

Temperature(Centigrade)	Frequency(MHz)	Tolerance(MHz)
-30	693.51362	693.53468 to 693.46533
-20	693.50141	
-10	693.51221	
0	693.49887	
10	693.50252	
20	693.51221	
30	693.50487	
40	693.49888	
50	693.50114	

15.5 Voltage Variation Test Procedure

1. Attached the power line of the power supply to the battery position of the EUT.
2. Tuned the output power level to battery end point, 85%, 100%, 115% of the normal operation power of EUT.
3. Recorded the frequency with a frequency counter.

15.6 Measurement Result

Frequency Stability of Voltage Variation Measurement Table

Test Frequency: 678.5MHz

Supply Voltage (Volt)	Frequency (MHz)	Tolerance (MHz)
2.55(85%)	678.50352	678.53393 to 678.46608
3.0(100%)	678.51221	
3.45(115%)	678.50014	

Test Frequency: 685.3MHz

Supply Voltage (Volt)	Frequency (MHz)	Tolerance (MHz)
2.55(85%)	685.30321	685.33427 to 685.26574
3.0(100%)	685.30528	
3.45(115%)	685.31252	

Test Frequency: 693.5MHz

Supply Voltage (Volt)	Frequency (MHz)	Tolerance (MHz)
2.55(85%)	693.49987	693.53468
3.0(100%)	693.50145	to
3.45(115%)	693.50142	693.46533

18 FCC ID Label

The Label must not be a stick-on paper. The Label on these products must be permanently affixed to the product and readily visible at the time of purchase and must last the expected lifetime of the equipment not be readily detachable.

Proposed Label Location on EUT
EUT Bottom View/proposed FCC Mark Location
