Date of Original E-Mail	3/6/00

1. Please see page 2 of this attachment for the requested occupied bandwidth for operation at the frequency of maximum audio response.

The frequency of maximum audio response was determined to be 5200 Hz.

2. The necessary bandwidth calculation is revised to show the 5200 Hz measurement.

$2M+2DK, \quad K=1, M=5200, D=5000. \quad 2M=10400 + 2D=10000.$

Necessary Bandwidth=20K0F3E .

3. It is my assumption that the above will also apply to the application for B5DM511, EA96521, since I received no "request for technical information" on that application. Other than the operating frequency, the modulation characteristics are exactly the same as item 1. and 2.

I trust the above is a satisfactory response.
