Description - Equipment Under Test (EUT)

Equipment: WCDMA Base station amplifier unit used in single carrier configuration.

Frequency range: 1930 MHz to 1970 MHz

Tested channels: 1932.5 MHz, 1947.5 MHz, and 1967.5 MHz.

Product number: KRB 101 1112/2, R1A

Serial numbers: See Hardware list in enclosure 7

The RF conducted measurements were done at the output connectors on top of the base station.

TRXB ROJ 119 2233/1 WCDMA transceiver units were used to generate the carrier channels. The identities of the units used can be found in the hardware list on encl. 7.

Configuration:

The transmitters were set-up according to 3GPP TS 25.141 V6.3.0 (2003-09) Test model 1. 16 DPCH:s at 30 ksps (SF=128) distributed randomly across the code space, at random power levels and random timing offsets are defined so as to simulate a realistic scenario which may have high PAR (Peak to Average ratio).

Manufacturer's
representative: Larry Lindström, Ericsson AB

Purpose of test

The purpose of the tests is to verify compliance with the performance characteristics specified in FCC CFR47.

Reservation

The test results in this report apply only to the particular Equipment Under Test (EUT) as declared in the report.

Delivery of test object

The test object was delivered: 2003-11-11

Test engineers

Peter Grahn
Jonas Bremholt
Fredrik Isaksson

Test witnesses

RF Power output measurements according to 47CFR 2.1046

Date 2003-11-13	Temperature 21 °C ± 3 °C	Humidity 26 % ± 5 %
--------------------	-----------------------------	------------------------

Test set-up and Procedure

The measurements were made per 3GPP TS 25.141. Measurements were made at output connectors J1, J2, and J3. The output was connected to a Peak power analyzer via a 50 ohm attenuator. The RF power was measured with variation in supply voltage at the highest power level. Test was performed on -48 V DC supply voltage system. The transmitters used during the measurement were set up according to Test Model 1 in 3GPP TS 25.141 during the measurements.

Measurement equipment	Calibration Due	SP number
Boonton RF Peak power meter/analyzer	2004-01	503 144
Boonton Power sensor 56518-S/4	2004-01	503 145
Attenuator 40 dB	2004-04	503 173

Band edge measurements according to 47CFR 2.1049

Date	Temperature	Humidity
2003-11-14	22 °C ± 3 °C	28 % ± 5 %

Test set-up and Procedure

The output was connected to a spectrum analyzer. The spectrum analyzer was connected to an external 10 MHz reference standard during the measurements. According to §24.238 a resolution bandwidth of 1% of the emission bandwidth was used in the 1 MHz band adjacent to the block edge. At frequencies more than 1 MHz away from the block edge the spectrum was integrated over 1MHz bandwidth. The transmitter was set up according to Test Model 1 in 3GPP TS 25.141 during the measurements.

Measurement equipment	Calibration Due	SP number
R&S FSIQ 40	2004-03	503 738
Attenuator 40 dB	2004-04	503 173
Testo 615, Temperature and humidity meter	2005-09	503 505

Measurement uncertainty: 3.7 dB

Results

Output J1:

- Diagram 1 Carrier 1932.5 Band edge +43 dBm output power
Diagram 2 Carrier 1932.5 Band edge +43 dBm output power

Output J3:

- Diagram 3 Carrier 1967.5 Band edge +43 dBm output power
Diagram 4 Carrier 1967.5 Band edge +43 dBm output power

Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least $43 + 10 \log P$ dB.

Complies?	Yes

Field strength of spurious radiation measurements according to 47CFR 2.1053

Date	Temperature	Humidity
2003-11-11	22 °C ± 3 °C	31 % ± 5 %
2003-11-12	21 °C ± 3 °C	35 % ± 5 %
2003-11-13	22 °C ± 3 °C	36 % ± 5 %

Test set-up and Procedure

The measurement procedure is per ANSI/TIA/EIA-603-2001. The semi anechoic chamber is listed at FCC, Columbia with registration number: 93866. The test site also complies with RSS 212, Issue 1, Industry Canada file no. :IC 3482.

All 3 TRXes in the cabinet were activated and the output connectors J1, J2, and J3 were terminated with 50 ohm attenuators with termination. The transmitters were set up according to Test Model 1 in 3GPP TS 25.141 during the measurements.

The measurements were performed with both horizontal and vertical polarisation of the antenna. The antenna distance was 3 m and above 18 GHz the antenna distance was 1 m.

A pre-measurement was first performed:

In the frequency range 30 M-20 GHz the measurement was performed in power. A propagation loss in free space was calculated and used as a transducer. The used formula, was, propagation loss = $20 \log(4\pi x \text{antenna distance}/\lambda)$.

The measurement procedure was as the following:

1. The pre-measurement was first performed with peak detector. The EUT was measured in eight directions and with the antenna at three heights, 1.0 m, 1.5 m and 2.0 m.
2. Spurious radiation on frequencies closer than 20 dB to the limit was measured with the substitution method according to the standard.

Results

Nominal Voltage -48 V DC
Output power: +43 dBm

The spurious radiation measured with the substitution method can be found in the table below:

		Spurious emission level (dBm)	
Frequency (MHz)	RBW	Vertical	Horizontal
30-20 000	1 MHz	All emission > 20 dB below limit	All emission > 20 dB below limit
Measurement uncertainty		4.7 dB	

Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least $43 + 10 \log P$ dB.

Complies?	Yes
