**RE: Correspondence #37264, Form 731 Confirmation #EA490565**

Dear Ms. Elliott:

This letter is in response to your e-mail request of March 27, 2009. The applicant requests that the Grant of Equipment Authorization be modified to extend the frequency range from 1,700 kHz to 1,710 kHz. The requested change does not require circuit modifications or equipment changes of any kind. The equipment as first designed, manufactured and tested in 1998 was capable of operating on the 1710 kHz frequency. However, at the time that certification was requested Part 90 TIS services were limited to the 530 kHz to 1,700 kHz frequency range and the documentation only covered that frequency range. Now that the FCC Wireless Bureau is authorizing TIS operation over the frequency range from 530 kHz to 1,710 kHz it is necessary that the manufacturer seek this change.

The manufacturer has reconfirmed in their laboratory that the frequency stability, power output, modulation and emission characteristics are essentially identical at 1,710 kHz and 1,700 kHz.

We believe that this is responsive to your request but ask that you contact us if any additional information should be required.

Sincerely,

Clarence M. Beverage
